" The Times," May 27th, 1903, says:-

"THE TEMPLE FLOWER SHOW.—The Royal Horticultural Society's Annual Flower Show, which was opened in the Temple Gardens, is always one of the prettiest sights to be seen in London during the season.

"As to the exhibition itself, the Society have never organised a more delightful and beautiful display; it shows superior cultivation all round, and the flowers have been arranged with much taste. In Tent No. 1 Messrs. James Carter & Co. have a grand exhibit of Gloxinias showing gorgeous blooms, Calceolarias with flowers almost four inches across, staged alongside a pigmy type, enormous Petunias, and a pretty rock garden fully planted with Alpines, while there are remarkable vegetable productions such as Peas, Tomatoes, Beans, and Carrots, and some splendid Melons."

HEAVY GARDEN SEEDS, WHETSTONE PARK.

A FORTUNE IN THE POTATO.

A farmer at Tattershall, Lincoln, bought a quantity of the celebrated tubers. In unloading, one potato was dropped in the roadway, and was picked up by a farm labourer, who at onee took it to the owner, well knowing its value. As a reward for his honesty the farmer gave the potato to the finder, telling him to plant it. This he did, and he has been offered \pounds_{30} for the result in his little garden patch.—

£2,240 PER TON.

NC

The homely potato would not at first sight appear to be a promising subject of romance, but the history of the NORTHERN STAR variety is almost as thrilling as a novel. We had a note when it occurred of the fact that the extraordinary price of $\pounds_{2,240}$ a ton had been paid for this potato. Each "eye" of these precious tubers was separately planted on a space of 2 acres 3 roods. Each potato, according to a report now received, has produced about 144 times its own weight.— Westminster Gazette.

Gardeners' Chronicle.

The value of any new commodity must naturally depend on the production, which in the ease of this $\pounds_{1,600}$ per ton was given by eager purchasers. Owing to the scareity and high price of the NORTHERN some cultivators grew their erops from eyes raised in a greenhouse : we did not do so as we are of opinion the scare of the sca

Carters' Selected NORTHERN STAR POTATOES were all grown in the open gro any protection whatever.

Whether or not the present values will be maintained we eannot say, but there is no doubt it is a g flesh, and grows a robust haulm, so that the plants should be given plenty of room. Last season it was a co "IT CROPS WELL, COOKS W

RTHERN STAR POTATO.

GAMBLING IN POTATOES.

The speculation in certain new varieties of potatoes for seed purposes, notably the NORTHERN STAR—it being the product of a Scottish potato grower—has reached a remarkable stage.

With the exception of what has at times been paid for new varieties of flowers, such extraordinary prices are probably unparalleled. In the spring, one of the best-known firms of seed merehants bought at the rate of $\pounds_{1,600}$ a ton. The resultant crop has not yet been harvested, but if the average result is attained the crop will probably be worth many hundreds of pounds.

A correspondent of the *Gardeners' Chronicle* tells an interesting story. His employer purchased 2 lbs. of NORTHERN STAR from a Yorkshire grower, which came packed in wadding like peaches. They were first planted in a warm house, and as the shoots appeared above ground cuttings were taken off, 200 in all, and rooted. These were afterwards transferred to the open ground. From the original 2 lbs. no less than 420 lbs. has now been lifted, the largest potatoes being obtained from the cuttings.—*Daily Mail*.

ut no one of them so nearly approaches my ideal as this. It is a heavy cropper, of have ever known."

is particular Potato was limited last season, and in consequence of the searcity the enormous price of N STAR POTATO last year, and with a view of getting as large a return as possible for the original outlay, that the system weakens the constitution of the Potato, and makes it an easier prey for disease.

ound as an ordinary field crop; they were not raised in a greenhouse or under

good Potato, and well deserving of a trial. It is a main crop, with a flattish round tuber and white common thing to dig from 10 to 14 lbs. weight at a root, and as a well-known grower puts it—

WELL, AND LOOKS WELL."

PACKING AND CARRIAGE FREE. SPECIAL QUOTATIONS FOR LARGE QUANTITIES.

For those who are only interested in getting as large a supply as possible from one planting, we illustrate by photograph the method or operation of cutting eyes.

Fig. 1.—Potato showing eyes in growth, which are cut out at the places marked.

Carters 237, 233, & 97, HIGH HOLBORN, LONDON. - 1904.

Fig. 2. — Single eye cut out, which is potted and transplanted to the open ground in spring after starting into growth.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

It is our privilege to hold the Royal Warrant of Appointment to His Majesty the King, and to announce that we have again been honoured with instructions to supply the bulbs required for the decoration of the Royal London Parks and Gardens next spring.

ALL PACKETS SENT OUT BY US BEAR OUR REGISTERED TRADE MARK OF TWO CARTERS AS ABOVE,

Another of our Registered Trade Marks.

AT OUR PRESENT ADDRESS.

In presenting our Annual Catalogue of Tested Seeds we would direct attention to the alteration we have made in the title, which seems to us better adapted to the needs of the times. Our object is to make it a more useful guide to the amateur gardener, at the same time serving the purpose of a first-class Seed Catalogue. Hitherto "Carters' Practical Gardener," which has had a sale of over 100,000 copies, has been a separate publication, and for the future we propose to embody its best features, giving amateurs sound advice in a concise but practical form, and useful hints as a reminder to the professional gardener.

I

Our Trade Mark.—The registered device in the margin has been for several years affixed to every package of seeds distributed by us. It is both simple and sufficiently distinct to protect everyone desirous of obtaining "Carters' Tested Seeds" as supplied in sealed packets. It is not enough to be told that "these seeds came from Carters'": our name and trade mark must be on the seal or we cannot guarantee that they emanate from our establishment.

It is gratifying to be able to state that, notwithstanding the wet and unfavourable harvest of 1903, the sources at our command enable us to offer qualities that will compare favourably with those of preceding years. All our seeds have been produced, harvested, and cleaned with the greatest care, in addition to being subject to repeated trials, which have fully established their claim to the possession of satisfactory germinating powers.

Carters' "Tested Seeds" in the Antarctic Regions. See page 4. The Finest Collection of Vegetables ever exhibited. See page 2. Northern Star Potato. See pages 2 and 3 of inset.

In this the 67th year of our being established at this address, we take the opportunity to tender respectful acknowledgments for past favours; and we beg to solicit a renewal of confidence, to merit which our best personal attention shall, as heretofore, be devoted.

James Caster,

Seedsmen to H.M. The Iking, 237, 238, & 97, High Holborn, London, England.

THE PRODUCE OF CARTERS' TESTED SEEDS

AT

The Royal Horticultural **Hociety's**

GREAT AUTUMN FRUIT AND VEGETABLE SHOW,

HELD AT

CHISWICK,

September 29th, 30th, and October 1st, 1903.

One of the chief objects of this Exhibition was QUALITY versus SIZE.

The Gardeners' Chronicle, October 3rd, says :-

"How well did the exhibits in the vegetable section justify the efforts put forth a few months since to induce the Council of the Royal Horticultural Society to promote a great vegetable exhibition. In the large tent devoted to vegetables, without doubt the two collections staged side by side there by Messrs. E. Beckett and J. Gibson constituted the primary feature; indeed, once seen few wanted to see others.

"THE FIRST PRIZE AND THE SHERWOOD 10 GUINEA CUP went to the grand collection exhibited by Mr. E. Beckett, Head Gardener to Lord Aldenham; the whole making a display THAT IN QUALITY AND ARRANGEMENT HAS NEVER BEEN EQUALLED."

Mr. Beckett writes on October 6th -"To Messrs. J. Carter & Co. I am sending along a photograph of the collection, which I think you will agree has come out well. Between 50 and 60 of the varieties staged were grown from seeds supplied by you." See Photograph on opposite page.

Over 10,000 Prizes have been reported to us by customers during the last few years. See full particulars on page 193.

Gasters =37, =38, & 97, HIGH HOLBORN, LONDON .- 1904.

CARTERS' TESTED SEEDS IN THE ANTAROTIC REGIONS.

S.S. "DISCOVERY" IN WINTER QUARTERS. GARDENING ON THE S.S. "DISCOVERY." From the " Illustrated London News." From the " Illustrated London News." By kind permission of Sir Clements Markham and the Editor.

In connection with the Expedition sent out by the Royal Geographical Society, it was our privilege to supply Captain Scott with a quantity of quick growing seeds, with instructions how to raise them under the most adverse influences of soil and situation in the frozen regions of the Antarctic Circle.

From the first reports that have reached England through the agency of the relief ship "Morning," it was stated in the Daily Telegraph of May 11th last, that-

"The only bit of green vegetable seen on the 'Discovery' was a crop of Mustard and Cress grown by the Officers on a wet blanket."

We reproduce our letter of Cultural instructions :-

Captain SCOTT, R.N., s.s. " Discovery."

25th July, 1901.

SIR,

We send a box containing seeds of quick growing vcgetables, including a quantity of Mustard and Cress, which can also be grown on damp flannel in the light, but shaded from strong sun.

The simplest plan is to soak the flannel, scatter the secd over it, place another wct piece on top, and let them lay together for a few days until the seed sticks to one or the other, when they may be laid out separately, and if kept damp the seed will

quickly sprout. You may find the other seeds useful in providing green meat where you may make your head quarters, if the soil and climate is suitable. If you try Mustard and Cress in shallow boxes of soil, kindly follow the

directions given in the little book enclosed with sceds.

We are, Sir, Your obedient Servants, JAMES CARTER & CO. (Signed)

An important communication bearing upon the result from Admiral Sir Clements Markham, K.C.B., F.R.S.-June 12th, 1903.

"Sir Clements Markham hears that the Mustard and Cress supplied by Messrs. Carter to Captain Scott were a great success and much appreciated."

A further consignment of Seeds, specially dried by our original process and packed in air-exhausted receptacles, has been sent out in the relief ship "Terra Nova."

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

IMPROVEMENTS IN PEAS.

Since the Royal Horticultural Society of England awarded to our House two First-Class Certificates in the year 1872, for our initial endeavours to create an advance in the cropping and eating properties of Peas, we have never relaxed our efforts in this direction, and although long continued experiments are both laborious and costly (our trials comprising 1,106 rows in 1902 and 1,259 in 1903), we have been more than compensated in being able to state that our persistency has been the means of the production of such magnificent improvements in Peas as *Telephone, Stratagem, Daisy*, and *Telegraph*, all of which have now a world-wide reputation. We now have the honour to introduce three new Peas, to our minds the greatest advance in Marrowfat Peas that the world has yet seen (*see* CARTERS' EIGHT WEEKS, *page* 7; CARTERS' MAYFLOWER, *page* 8; and CARTERS' BUTTERCUP, *page* 15), and to which we have affixed popular names, as in the case of the four grand Peas mentioned above. These fine varieties will, we are certain, uphold the reputation of our house as introducers of new Peas that come to stay.

GREEN PEAS.

FOR SUCCESSIONAL USE FROM JUNE TO NOVEMBER.

We have offered the following selection of choice garden Peas with so much success that we again quote the group as representing the best collection calculated to produce Peas for five months, under fair conditions, if sown at varying periods during the spring and summer. It would be difficult to give precise dates for putting the seed into the ground, as so much depends upon soil and situation. Suffice it to say that the last sowings should not be made later than the second week in June.

Name.	Description.	Height.	When to Sow.	Expect Ready to Pick.	PRICE, Carriage Free.
					Per pt. Per qt.
Carters' Lightning	First Early White Round	21 ft.	In February	May to June	2s. 3s. 6d.
Carters' Early Morn	First Early Marrowfat	3 ft.	End of March	During June	2s. 3s. 6d.
Carters' Daisy	Second Early Marrowfat	11 ft.	Middle of April	Early in July	2s. 3s. 6d.
Carters' Danby Stratagem	Mid-season Marrowfat	3 ft.	End of April	July	2s. 3s. 6d.
Carters' Model Telephone	Main Crop Marrowfat	5 ft.	Middle of April	July	2s. 3s. 6d.
Carters' Model Telegraph	Main Crop Marrowfat	5 ft.	End of April	July & August	2s. 3s. 6d.
Carters' Michaelmas	Late Marrowfat	3 ft.	End of May to middle of June	Sept. to Nov.	2s. 3s. 6d.

Successional sowings of these Peas may be made at any time between the dates named.

The Collection, I pint each of the above 7 varieties, price 125. 6d. Carriage Free. The Collection, I quart each of the above 7 varieties, price 215. od. Carriage Free.

HINTS ON THE CULTIVATION OF PEAS.

French—Pois.	German—ERBSEN.	Dutch—ERIOT.	Italian—PISELLI.						
Spanish-GUISANTE.									

DESCRIPTION.—A popular vegetable. The green seeds are cooked and eaten; in a few varieties the pods are eut into slices and cooked like French Beans.

VARIETIES.—Round-seeded, embracing very carly and very hardy kinds. Wrinkle-seeded, including all the sweetest and best marrowfats. Others bear pods that are edible.

SEASON OF SOWING. - From November to June; the usual months extending from February to May.

How to Sow.—One pint of a small-seeded variety will sow a row about 200 feet, whilst a similar quantity of a large-seeded marrowfat may only do 150 feet, in zigzag rows, each seed about an ineh apart to allow for failures. In heavy soil it is advisable to sow thickly, as vermin are likely to spoil many. The rows should be the same distance apart as the variety is stated to grow high. Market growers commence in November with the early hardy kinds, but for ordinary gardening purposes the dates given above are recommended. If put in too early, the most delieate of the marrowfats are liable to rot in the ground.

TRAINING.— The present day rage is for dwarf Peas, and even these should have some support, as in a wet summer many of the pods will get spoilt. Nothing is better than the brush-wood, sold in bundles as "pea-sticks." If the plants stand too thickly they should be thinned a trifle.

How TO GATHER THE PODS. - An unpractised hand should cut them off and not pull them.

GENERAL NOTES.—This fruiting vegetable flourishes in a deeply dug rich soil, and the Peas are all the better flavoured if there is a little lime in it. It should be firm, and the drill made say 3 to 5 inches deeper than ground level. As a rule the seed is sown too near the surface, and the haulm is often burnt up before it has completed its eropping powers. It is an advantage to lay a dressing of manure on either side when in flower to assist to retain the moisture in the soil (*see Illustration*). Never water unless it is done thoroughly. A mere sprinkling is worse than nothing.

MULCHING PEAS.

ENEMIES.—Miee cat the seeds after sowing, but if a dressing of soot, pepper, and lime is seattered up the drill at the time, it will check their depredations. Such an application over the

young growth after a sprinkling of water is also serviceable against the attacks of insects and slugs. Birds ean be kept away by stretching black cotton along the lines (*see Illustration*), or garden netting may be arranged on supports a foot high, and is thoroughly effectual. The haulm should be burnt after the erop is gathered.

NOTICE.—For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6. Casters 237, 238, & 07, HIGH HOLBORN, LONDON.—1904.

PEAS FOR FORCING,

OR FOR EARLY USE IN POTS OR FRAMES.

> This New Marrowfat Pea is earlier by several days than the earliest we have ever had in our trial grounds.

Photographed and Copyrighted by J. C. & Co. CARTERS' EIGHT WEEKS PEA.

CARTERS' EIGHT WEEKS.—The Earliest Pea we have ever grown. A very hardy Marrowfat, growing 15 inches high, and possessing all the good points of the best type of *American Wonder*, which was one of its parents. As both a forcing and early border variety it must become a boon to gardeners whose demands are heavy early in the season. The seed is slightly dented, filled with sweet-tasting peas.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

Carters' Forcing Pea.—A valuable marrowfat Pea for under glass culture. Its stocky growth is rarely more than I foot in height. It commends itself not only to professional gardeners who are required to produce Peas nearly the year round, but also to amateurs having a greenhouse or vinery doing practically nothing through the winter months, and who can, with this sturdy Pea, raise supplies for their table very early in the year.

In sealed packets, price 15. 6d. per pint, 2s. 6d. per quart.

NOTICE. - For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

A NEW FIRST EARLY LONG-PODDED MARROWFAT PEA.

8

CARTERS' MAYFLOWER.

Carters' Mayflower.—A First Early Marrowfat Pea. A CROSS BETWEEN Daisy AND William Hurst. This is a grand thing, with long pointed pods twice the size of William Hurst and much more freely produced. The bine is robust, NEW BOT like Daisy, and the healthy habit also favours this parent. Seed wrinkled. Height, about 18 in. Everyone should try this fine introduction, which is but very inadequately shown in the photograph. In sealed packets, price 2s. per pint, 3s. 6d. per quart.

NOTICE. - For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6.

Casters 237, 238, & 97. HIGH HOLBORN, LONDON. - 1974.

A FIRST EARLY MARROWFAT PEA.

CARTERS' EARLY MORN.

This fine Pea continues to retain its position as a unique *first early sweet Marrowfat*. The demand for seed was so large last season that we were unable to fill all requirements, and as it is likely to be so again, we recommend customers to buy early. As with most highly-bred varieties, it is very difficult to keep true, and

> although on rich soils the haulm will sometimes go a little taller—and it is only by a rigid selection each year of the most approved plants that this peculiarity in its character is minimised - in an ordinary way it does not reach beyond 3 feet. The pods are very large and well filled, and are ready to pick in June. Their size, together with the habit of the plant, is clearly shown in the Photograph.

> Granted an Award of Merit, Royal Horticultural Society, April, 1899, proving its adaptability for forcing.

> CARTERS' EARLY MORN PEA may be briefly described as a Sweet MARROWFAT, as early as CARTERS' LIGHT-NING, with enormous pods resembling CARTERS' DAISY.

In sealed packets only.

Price 2s. per pint, 3s. 6d. per quart.

We have received very many letters from our customers in praise of this fine Pea, and only regret we have no room to find a place for them.

NOTICE. - For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6.

Photographed from Nature and

Copyrighted by J. C. & Co.

CARTERS' EARLY MORN.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

Carters' Lightning.—A re-selected stock of the earliest White Round-seeded Pea. Height, about $2\frac{1}{2}$ feet.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

Carters' Blue Express.—A re-selected stock of an early Round-seeded and a very productive bearer, the pods well filled with fine flavoured Peas, of a distinct colour when boiled. Height, $2\frac{1}{2}$ feet.

In sealed packets, price 1s. 9d. per pint, 3s. per quart.

Carters' Daylight.—A very early Marrow, with large well-filled pods. Height, 2½ feet. In sealed packets, price 15. 9d. per pint, 35. per quart.

Carters' Diamond.-An extra early White Gem. Height, I foot.

In sealed packets, price 15. 9d. per pint, 3s. per quart.

Carters' Dwarf Favourite.—For gardens where space is an object this is the Pea to grow. Height, I foot.

In sealed packets, price 1s. 9d. per pint, 3s. per quart.

Carters' Superior .- A highly-selected early Blue-seeded Pea, with large pods.

Height, 4 feet.

In sealed packets, price 1s. 6d. per pint, 2s. 6d. per quart.

Carters' Springtide.—A first early well-known Marrow. Height, $2\frac{1}{2}$ fcet.

In sealed packets, price 15. 6d. per pint, 2s. 6d. per quart.

NEW AND VALUABLE MARROWFAT PEAS.

Carters' Battleship

(See Photograph). The bluntended pod of this robust Marrowfat Pea is its peculiarity, and we decided to give it a popular name. It is a superior marrowfat of the Ne Plus Ultra type, but much earlier. The fine dark green pods, which hang in pairs, clearly imitate in size that grand Pea Telephone, which we introduced many years ago. The peas are rich flavoured and a bright green when served at table. The haulm is exceedingly robust, and stands both drought and mildew better than others. Height, 5 feet.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

Victor Marrowfat Pea,

NEW D A dwarf Marrowfat Pea with the highest possible commendations, as it possesses a combination of many of the most desirable characteristics of a serviceable variety. It is among the earliest to mature. Its dwarf bushy habit of about 15 to 18 inches obviates the necessity for sticks and renders it serviceable for borders. Its pods are larger than any of the well-known Peas of the early dwarf class, and its seed is distinct, while its quality and flavour is delicious.

In sealed packets. price 25. per pint, 35. 6d. per quart. For cultural directions, see page 6.

Notice.—For the best Peas for Successional and Exhibition use, see page 5.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

EARLY AND MID-SEASON MARROWFAT SECOND PEAS.

Carters' King of the Earlies .- This early Pea is a cross between our well-known Daisy and another first early sweet Marrowfat, and was raised at the Royal Gardens, Windsor. It produces a robust haulm from 15 to 18 inches in length, covered with giant pods. In sealed packets, price 25. per pint, 35. 6d. per quart.

Carters' Pride of the Market .- A fine main crop blue Marrowfat Pea, belonging to the same family from which our Stratagem was selected. Being a strong grower it requires to be thinly sown. Height, 11 to 2 feet. 1

TRADE MARK REGISTERED.

In sealed packets, price 18. 3d. per pint, 25. per quart. Carters' Seedling - A superior main crop Marrow Pea, the result of two distinct crossings, its parents

being the well-known and valuable Peas, Stratagem, Queen, and Autocrat. Height, 3 feet.

In sealed packets, price 28. per pint, 35. 6d. per quart.

Carters' Majestic .- A splendid mid-season Marrowfat Pea, valuable alike for the table and exhibition. Height, 3 feet. In sealed packets, price 28. per pint, 35. 6d. per quart.

Photographed from Nature and Copyrighted by J. C. & Co.

Introduced by us last Season, and well spoken of.

Carters' Commonwealth.—A grand selection from one of the best types of Carters' Stratagem, differing in several ways, notably the shape of pod, from Carters' Danby Stratagem. It is a strong grower, and a prolific bearer of large exhibition pods, besides being a first-class table pea. Strongly recommended. Height, 2 feet.

In sealed packets, price 28. per pint, 38. 6d. per quart. For Carters' Selection of the best Peas in the World, see page 5.

Carters 237, 238, & 97, HIGH HOLBORH, LONDON. - 1904.

CARTERS' DAISY PEA.

Photographed from Nature and Copyrighted by J. C. & Co. CARTERS' DAISY PEA.

First-Class Certificate, Royal Horticultural Society, 1902.

This grand dwarf Marrowfat Pea has been before the public for some years, and still stands at the head, as confirmed by the great independent trial of Peas conducted by the Royal Horticultural Society of England in 1902. Their experiment comprised over 80 varieties, and CARTERS' DAISY gained the First-Class Certificate given by the Society

CARTERS' DAISY PEA is an early main crop, growing about 15 inches high. The haulm is very robust, and the crop of giant well-filled pods of good colour is enormous.

In sealed packets, price 2/- per pint, 3/6 per quart.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

A coloured photograph natural size.

N

CARTERS DAISY PEA.

Awarded First-Class Certificate Royal Horticultural Society, 1902. See opposite page.

A NEW SWEET MARROWFAT. Height, 2 feet.

CARTERS BUTTERCUP PEA.

In sealed packets, price 2/- per pint; 3/6 per quart. For full particulars see page 15.

NEW SWEET MARROWFAT PEAS.

CARTERS' BUTTERCUP.- (See Coloured Photograph opposite.) Best described

NEW NEW with long, handsome, well-filled pods. Height, about 2 feet. Pods dark

green, produced in pairs, averaging 10 peas in each. We have counted as many as 22 pods on a single plant ready to gather at one time. May be described as an early main crop, with particularly robust habit. The large, deep green seed, which is almost round, retains the sweet marrowfat flavour when cooked. Peas having seeds of this character are well adapted for cold, wet, and exposed situations.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

CARTERS' EXTRA EARLY DAISY. — We have been endcavouring for some years to create a counterpart of Carters' *Daisy* Pea in the early section, and we offer this magnificent type, which bears its enormous pods closely after the earliest wrinkled seeded types. It is exceedingly robust, with dark foliage, and is literally covered with fine pods. The Peas are also very sweet eating. Height, 18 inches.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

CARTERS' EDWARD VII.—In the trials of the Royal Horticultural Society we were granted an Award of Merit for this superb early Marrow Pea. It is a first-class representative of the forward section of Marrowfats, but has *Ne Plus Ultra* shaped pods of a beautiful lustrous green, filled with fine, large, sweet-eating Peas. IIci_sht, 3 feet.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

NOTICE. - For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904

C .

A Large-Podded Sweet-Flavoured Marrowfat.

Photographed from Nature and Copyrighted by J. C. & Co.

CARTERS' TORPEDO.

Carters' Torpedo.—This grand Marrow Pea supplies the long-felt want of a first-class table Pea that will come into bearing between Carters' *Early Morn* and the original *Duke of Albany*, which it imitates in all its best characteristics, but is 12 inches shorter in the haulm and seven days earlier in maturing. Our photograph very faithfully depicts the fine pods, which are dark green, borne upon strong branching foliage, and containing from 8 to 12 enormous Peas, very sweet when cooked. Height, 3½ feet. In sealed packets, price 28. per pint, 35. 6d. per quart.

NOTICE. — For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6.

Carters \$37, 238. & 97, HIGH HOLBORN, LONDON. - 1904.

One of the very best Peas grown. Photographed from Nature and Copyrighted by J. C. & Co.

CARTERS' DANBY STRATAGEM.

AWARD OF MERIT, Royal Horticultural Society.

Carters' Danby Stratagem.—A distinct improvement on the original *Stratagem*, having longer, straighter, and broader pods, very freely produced. The haulm is very robust, and extends to a height of 22 feet, bearing a profusion of immense pods, many six inches in length, and frequently containing ten large full-flavoured Marrow Peas. In sealed packets, price 25. per pint, 35. 6d. per quart.

For Carters' Selection of the Best Peas in the World, see page 5.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON - 1904.

POPULAR MAIN CROP MARROWFAT PEA. A

5 FEET IN HEIGHT.

Oarters' Model Telephone. -A re-selection for robustness and delicacy of flavour from Telephone, a main crop wrinkled marrow, which

bears to-day a world-wide reputation. No other Pea extant can claim equal honours with Carters' Telephone on the exhibition table. Peas wrinkled, 9 to 11 in a pod, delicious when cooked. Height, 5 feet. Peas wrinkled,

In sealed packets, price 25. per pint, 35. 6d. per quart.

Carters' Dwarf Telephone.-

Photographed from Nature and Copyrighted by J. C. & Co. CARTERS' MODEL TELEPHONE.

Award of Merit, Royal Horticultural Society.

This is the result of several years' work in the effort to get a Pea with all the excellent qualities of Carters' Telephone, without its tall growth. Its height is 11 to 2 feet; habit stocky, healthy, and vigorous, and remarkably uniform. Stock limited. In sealed packets, price 25. per pint, 35. 6d. per quart. In sealed packets, price 28. per pint, 38. 6d. per quart.

NOTICE. - For the best Peas for Successional and Exhibition use, see page 5. For cultural directions, see page 6.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

POPULAR MAIN CROP MARROWFAT PEAS.

Carters' Model Telegraph.-A

selection from our original *Telegraph*, which is well-known. Very valuable as an exhibition Pea, on account of the size and fine dark colour of the pods. The seed is round and of a deep green colour, which is retained when cooked. The flavour is also of the sweetest. Height, 5 feet.

In sealed packets, price 28. per pint, 35. 6d. per quart.

Carters' Anticlpation.—Anticipation grows to a height of about 2½ feet, and sown at the usual season it comes into bearing early in July. The foliage is of a medium shade of colour, the habit robust, with immense straight pods containing Peas of an exquisite flavour when cooked.

In sealed packets, price 28. per pint, 38. 6d. per quart.

We were awarded the First-Class Certificate of the Royal Horticultural Society for Peas in 1902.

Photographed from Nature and Copyrighted by J. C. & Co.

CARTERS' LATEST MARROWFAT PEA.

PODDING UP TO LATE IN AUTUMN.

Oarters' Michaelmas Pea.-

This grand Pea quitc oversteps the boundary hitherto set by the times and scasons, and is absolutely distinct. Late varieties of Peas of past fame have been late mainly by reason of their strawy character. The constitution of Carters' Michaelmas Pea is not run through in straw, but we have fixed a dwarf bushy growth of 23 feet, which holds back its natural force and throws it into the pods ; consequently, while being very prolific, its colour in pod is of the deepest green, and its pods are large and well filled. We have proved this Pea to possess a reserve of strength which will enable it to resist the drought and the mildew to a degree hitherto unknown in a Pea.

This grand Pea was included in the First Prize Collection of Vegetables exhibited at the Vegetable Conference of the Royal Horticultural Society in September last.

In sealed packets, price 25. per pint, 35. 6d. per quart.

SELECTIONS OF PEAS.

Recommended to produce a good succession of finc-flavoured Peas, as they include only approved sorts, which have been thoroughly tested in our Trial Grounds :--

DWARF FRENCH BEANS.

Photographed from Nature and Copyrighted by J. C. & Co.-MJCH REDUCED.

Carters' Stringless Dwarf French Bean, Canadian Glory.—An *Extra Early* Dwarf Green-podded French Bean, possessing the invaluable quality of bearing pods absolutely without strings or threads. It is equally valuable eaten as a *Flageolet* or *Haricot*, as on the Continent.

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

Carters' Stringless Dwarf French Bean, Holborn Wonder.—The great success which has attended our introduction of the first stringless Green-podded Bean, Carters' *Canadian Glory*, has encouraged us to pursue our efforts in selecting stringless Beans for general use. Our *Holborn Wonder* will be found to be free from threads, is quite distinct and very prolific, and we confidently recommend it.

HINTS ON THE CULTIVATION OF BEANS.

RUNNER BEANS.

French-HARICOTS à RAMES.

German-STANGENBOHNEN.

DESCRIPTION. A popular vegetable, the pods of which are gathered young, cut into slices, or boiled whole, and served at table with or without additions.

VARIETIES.—The differences arc in the colour of the seeds, the flowers, and the size of the pods. There is also a climbing class of French Bean that is fast becoming popular.

TIME OF SOWING.—Being very tender, this Bean should not be sown out of doors until the end of April in warm situations, and the middle of May in exposed places.

How to Sow.—Set the seeds in a drill about 4 inches deep, each Bean about 6 inches apart, and the rows 6 feet apart. To save time, some sow them in boxes under glass and transplant outside during May.

IN SEASON .- From August until killed by frost.

ENEMIES.—Slugs atack the young plants, and may be checked by frequent applications of soot.

GENERAL CULTURE.—The popular method of culture is on tall stakes, one to each plant (see *Illustration*), or they may be grown like Dwarf Beans, by pinching the climbing portions back to one eye from the main stem. When grown by this method the rows need only be 3 fcct apart. The flowers often die off for want of moisture at the root, or sometimes from inclement weather, which hinders the bumble bee from getting amongst them.

HOW TO STAKE RUNNER BEANS.

DWARF BEANS.

French—HARICOTS NAINS. German—KRUPPBOHNEN.

DESCRIPTION.—A useful and very popular vegetable, the pods of which are gathered and cooked in much the same way as Runner Bcans.

VARIETIES.—There is not much difference noticeable when growing, except in size and shape of pod, but the several varieties have seeds of different colours. There is also a climbing French Bean.

TIME OF SOWING.—For early work they are sown in pots and beds under glass, and grown in a warm temperature. For successional crops they may be sown in pits and frames, and for the main crops out of doors, from the middle of April to the beginning of July.

GENERAL CULTURE.—Sow in rows or drills 2 feet apart in the open ground, and thin out the plants to about 12 inches apart, as they require plenty of air amongst and around them to form robust and sturdy plants. For pot work sow in the 24 size pot, three-parts filled with rich turfy loam, and thin out to three plants in a pot. Grow in moist heat, and support plants as soon as they begin to lengthen with some brushy sticks. Beans may be had in this way during winter and early spring.

ENEMIES.—Slugs are very destructive to the young plants, and should be kept in check by applications of soot.

Casters 237, 238, & 97. HIGH HOLBORN, LOHDON .- 1904.

RUNNER BEANS.

Carters' Holborn Seedling.—A most remarkable Runner Bean. It has NEW **W** and distinct features, particularly in the size and colouring of its seed, which give it a most striking and distinct individuality.

Carters' Jubilee Runner.—This extraordinary Bean still remains one of the best, and its records on the exhibition 'able stand unrivalled. Carters' *Jubilee Runner* produces an enormous crop of immense pods, which are thick and unusually fleshy, the flavour being all that is desired.

Carters' Elephant Runner.—Large size and very prolific. See price on opposite page.

Carters' Holborn Masterpiece.—A very robust and hardy Bean of the Caseknife type.

In sealed packets, price 2s. per pint.

Carters' Champion Scarlet Runner.—A great improvement upon the old type. Per pint 1s. 6d. ; per quart 2s. 6d.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1994.

RUNNER BEANS.

As a climber, Carters' Holborn Seedling is equal to the most robust of its class, while its large, handsome, fleshy pods—too long to figure naturally within the limitations of the page of this catalogue—are borne in the greatest profusion.

In sealed packets, price 2s. 6d. per pint.

"We grew Carters' Jubilee Runner Bean 11 inches in length."—Mr. W. J. MILLBROOK. Fifty-one Prizes have been reported by Customers in 1902 and 1903. In sealed packets, 25. per pint; 35. 6d. per quart.

Thirty-three Prizes have been reported by Customers in 1902 and 1903. In sealed packets, 25. per pint.; 35. 6d. per quart.

CLIMBING FRENCH BEANS.

A REDUCED PHOTOGRAPH OF CARTERS' TEN-WEEKS CLIMBING FRENCH BEAN. **Carters' Ten Weeks.** — (See Photograph.) The earliest of all Climbing Beans. It produces pods fit for table use ten weeks after sowing, under normal conditions. The pods hang in clusters, in greatest profusion. If brought upon the table young they have a tenderness and delicacy in flavour quite new and surprising. Its earliness, productiveness, and tenderness make it a great acquisition.

THE ROYAL HORTICULTURAL SOCIETY, reporting its trials made at the Experimental Grounds, Chiswick, says :--- "Pods long, broad, straight, and as fleshy as a Scarlet Runner; very heavy crop."

In sealed packets, price 2s. per pint, 3s. 6d. per quart.

Climbing French Bean.-Original type.

Price 2s. 6d. per quart.

Our High-Class Strains.— We would direct attention to the fact that nearly 60 of the varieties of Vegetables in the **First Prize** Collection at the Vegetable Conference of the Royal Horticultural Society, 1903, were the produce of Carters' Tested Seeds. (See page 3.)

For cultural directions, see page 23. FREE CARRIAGE OF SEEDS, see page 195.

Gasters \$37. 338, & 97 HIGH HOLBORN, LONDON .- 1904.

HINTS ON THE CULTIVATION OF BROAD BEANS.

French—Fèves de Marais. German—Garten Bohne. Dutch—Tuin Boonen. Italian—Fava. Spanish—Haba.

DESCRIPTION.-A popular vegetable, the seeds of which are cooked and eaten.

VARIETIES.—Early short podded, and later long podded, some produced upright, others hanging down, some singly, others in clusters. The seeds of the majority are liver coloured when cooked, others of more modern introduction, such as Carters' *Green Leviathan*, retain their green colour.

UPRIGHT OR CLUSTER PODDED. (Carters' Royal Dwarf Fan).

HANGDOWN PODS. (Carters' Leviathan).

WINDSOR BEAN. (Carters' Improved).

TIME OF SOWING.—November for the early varieties, to March. Being hardy, the weather has little effect on this plant while young.

How to Sow.—Make a drill, say 4 inches wide and the same deep, and set in the Beans about 4 inches apart, the later ones 6 inches, in rows 3 feet apart.

IN SEASON .- From May to July according to method of culture.

GENERAL CULTURE.—In windy districts it is an advantage to stick each plant sufficiently secure to keep it from blowing about. This Bean prefers a strong rich soil. After the crop is taken, the stems should be collected and burnt, and the ground dusted with soot before preparing for the next crop.

ENEMIES.—A black fly often attacks this Bean, and in hot and dry soils will sometimes multiply so quickly as to ruin the crop. It generally makes its first appearance at the point of the growth, which should be pinched out, collected in a pail, and burnt. For checking mice and birds apply the same prescription as recommended for Peas.

Casters 237, 236, & 97, HIGH HOLBORN, LONDON .- 1904.

SECTION OF POD OF CARTERS' LEVIATHAN BROAD BEAN.

LA An

BROAD BEANS.

THE LARGEST AND BEST VARIETIES.

Carters' Leviathan (White Seeded). — The longest podded and finest Broad Bean in cultivation, producing enormous pods, measuring 13 to 21 inches in length; most prolific, and specially recommended for exhibition.

Since the introduction by us of this fine Bean, many so-called longer podded varietics have been brought forward, but none have proved superior, and it stands to-day as the greatest acquisition in its class. Sixty-five First Prizes have been reported in 1902 and 1903.

In sealed packets, 1s. 6d. per pint, 2s. 6d. per quart.

Carters' Green Leviathan (Green Seeded).

THE ROVAL HORTICULTURAL SOCIETY, reporting its trials at their Experimental Grounds, Chiswick, says :--- "IMMENSE LONG PODS."

NEW **W**e introduce this as a fitting companion to its prototype, Carters' *White Leviathan*. The latter has now acquired such a wide reputation, that any improvement upon it will be well received ; and when we state that the Bean we now offer for the first time carries pods of equally enormous proportions, and has the additional advantage of a bcautiful green colour which is retained when cooked, its merits will be at once recognised. Its flavour is most mellow and delicious.

In sealed packets, price 2s. per pint, 3s. 6d. per quart. For cultural directions, see page 27.

Photographed and Copyrighted by J. C. & Co. This fine Exhibition Broad Bean has been known to reach a length of 21 inches.

CARROT.

Carters' Long Forcing.—A handsome long Carrot, with the same depth of colour and firmness of texture in its earliest stages as other Carrots possess in their later growths. CARTERS' LONG FORCING CARROT.—" This forcing Carrot is one of the most distinct and valuable that we possess, and when better known it is sure to be extensively grown. It is the quickest variety that I know of, and makes but very little top, and the quality is excellent. As a Carrot coming into use early in the year, and for exhibition, it is an acquisition."—E. B. in *Gardeners' Chronicle*.

In sealed packets, price 1s. 6d. each.

CARTERS' SUMMER FAVOURITE.

Carters' Summer Favourite.-(See Coloured Photograph opposite.) Awarded Royal Horticultural Society's Silver Medal. A great acquisition, producing handsome, well-grown, bright cochincal-scarlet Carrots very early in the season. The quality is superb, and as an exhibition variety coming into use early it will be found invaluable for showing in the summer months. 16 First Prizes reported to us in 1903.

In sealed packets, price **15. 3d.** per ounce.

CARTERS' GOLDEN BALL.

In scaled packets, price **is.** per ounce.

CARTERS' BLOOD RED.

NEW IS

Carters' Blood Red,-This Carrot has so many good and new qualities that it makes a distinct step in advance of other long Carrots.

It has a depth of colour not hitherto seen in Carrots, the texture of its flesh, while solid and crisp, is of the most tender, and entirely loses the pithy heart found in many largegrowing varieties. It has very large handsome long roots, matures very early, carries only a medium top, with a purple neck, and for winter keep cannot be equalled. As an exhibition variety, as well as for the market and the table, its distinctive appearance will make it attractive and quickly set up a demand.

In sealed packets, price 1s. 6d. each.

THE ROYAL HORTICULTURAL SOCIETY, reporting its trials at the Experimental Grounds, Chiswick, says :- "Roots long, handsome, deep rich colour, the core being same colour as the outer part; foliage very finc. A HANDSOME DISTINCT VARIETY."

For other varieties, see next page. For cultural directions, see page 32.

Casters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

A coloured pholograph about half size.

CARTERS SUMMER FAVOURITE CARROT.

In sealed packets, price $1/3\ {\rm per}$ ounce. For full particulars see opposite page.

CARTERS RED ELEPHANT CARROT. In sealed packets, price 1.6 per ounce. For full particulars see opposite page.

CARROT.

Carters' Red Elephant.—(See Coloured Photograph opposite.) A veritable giant both in length and rotundity. Specimens have been exhibited at our establishment measuring two feet and a half in length (30 inches). It has been brought to this high standard of perfection by one of the best professional gardeners, from whom we originally acquired the whole stock. It is a remarkable variety, and one which has already become prominent in first-class gardens and on the exhibition table. 37 First Prizes reported in 1902 and 1903.

In sealed packets, price 15. 6d. per ounee.

This fine Carrot was included in the First Prize Collection of Vegetables at the Vegetable Conference of the Royal Horticultural Society, September, 1903. See page 2.

Carters' Scarlet Perfection.—Awarded a Special Certificate of Merit at the Vegetable Conference of the Royal Horticultural Society. A distinct and greatly improved form of Garden Carrot. It is midway in length between the *Long Surrey* and the well-known *Intermediate*, with the bright scarlet colour of the *Surrey*. The flesh is solid, crisp, and fine flavoured. Invaluable alike for table, exhibition, and market purposes. 101 First Prizes reported to us in 1902 and 1903.

In sealed packets, price 15. per ounce.

HINTS ON THE CULTIVATION OF BEET AND CARROT.

BEET.

French-BETTERAVE, POTAGÈRE. German-RUNKELKÜBE. Dutch-BETWORTEL. Italian-BARBABIETOLA. Spanish-REMOLACHA.

DESCRIPTION.—A vegetable grown for its root, which is boiled and sliced into salads, or pickled.

VARIETIES.—Round-rooted types and long-rooted ones. Some have bright erinson flesh, others dark blod red, and a few have white flesh. The dark shining-leaved sorts are often used in the decoration of flower beds and borders.

SOWING SEASON.—Beet is rather tender, and should not be sown out of doors before April.

How to Sow.—In lines or drills at the rate of one ounce of seed to 40 feet of length, the seedlings being ultimately thinned out to τ foot apart. The rows should be 2 feet apart, and the drills about τ inch deep.

GENERAL CULTURE.—Beet prefers a nice clean soil, fairly rich, and deeply dug. Hoeing frequently between the rows during summer, and keeping weeds out of the lines, is about all the work needed. For the boring process adopted by Exhibitors see Carrot.

SEASONS WHEN READY.—Round Beet is very quick in maturing, and ready for use in the summer salads; but the long rooting variety requires the whole season to develop, and may not be fit to lift until October.

STORING.—See Carrot.

CARROT.—(See pages 30 and 31.) French—CAROTTE, German—MÖHREN, Dutch—PEEN WORTEL, Italian—CAROTA, Spanish—ZANDHORIA,

DESCRIPTION.—A vegetable, the root of which is edible.

VARIETIES.—There are short-rooted and long-rooted kinds, varying in degrees of earliness, shape, and colour. With the exception of Carters' *Long Forcing*, all the very early types are short rooted.

WIREWORMS ATTACKING BEET, AND THE SAME OFTEN HAPPENS TO CARROTS,

SOIL.-Medium to light, fairly rich.

CARROTS. SOWING SEASON.—Early Carrots are grown in frames, and often on hot beds, to be available for gathering during winter. Others are sown in boxes and transplanted, and first sowings are made on warm borders in February to be ready for pulling in spring. The main crops are sown in March and April, and are not ready until summer is well advanced.

How TO Sow.—In drills about 12 to 15 inches apart, thinning the seedlings from 4 to 9 inches according to the variety.

GENERAL CULTURE.—Keep weeds down, and stir the soil with a hoe occasionally during the summer; while young, dust with lime and soot about once a week to cheek slugs, and more frequently during moist weather.

STORING BEET OR CARROTS.

ENEMIES.—The Carrot Fly, which lays its eggs at the neck of the roots; wireworm, which eats into the roots; and slugs, which cat off the seedlings. All can be ehecked by dustings of soot, lime, and pepper.

STORING.—If wanted for winter use, the roots should be carefully lifted and laid

A BEET OR CARROI GROWN BY THE BORING PROCESS.

in dry earth or sand in a shed in heaps, the head being outward (see Il.ustration). If the surplus leaves are shortened the roots will keep fresh through the winter.

Leading Exhibitors follow the boring process in order to raise symmetrical specimens (see Illustration). This plan is adopted to give a fine, long, even growth. In explanation, we may remark that two iron hars are brought into play—first a stout one for making a hole 18 inches deep, and a thinner and longer bar is used to extend the depth another foot. Well prepared loamy compost is then filled into the holes and pressed down, while into the surface five or six seeds are carefully planted. Having grown fairly large, the plants are thinned out. The strong one near the centre is left in the soil, and in the enriched ground the plant quickly asserts itself. This method of culture applies only to long-rooted varieties.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

SUMMER BEET.

included in the First Prize Collection exhibited at the Vegetable Congress of the Royal Horticultural Society. held in September last.

Photographed and Copyrighted by J. C. & Co. The Roots are ready for use in the Summer Salads.

Carters' Crimson Ball .- (See Photograph.) Round Beets are of the greatest value on account of earliness. The roots can be lifted during the height of the summer season when salads are in demand; and the fresh taste imparted by the highly-coloured slices are considered preferable to those from stored roots. The old-fashioned flat types were never in favour with cooks, because of their weak colour and stringy texture. In Carters' Crimson Ball these defects have been remedied.

In sealed packets, price 1s. per packet ; 1s. 6d. per ounce.

For other varieties, see next page. For cultural directions, see page 32. FREE CARRIAGE OF GOODS. See page 195

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

Photographed and Copyrighted by J. C. & Co.

Carters' Perfection.—(See Photograph.) As the Bect family is very sensitive to cross fertilization, we start afresh from time to time, with stocks with "new blood." We have done so quite recently with our *Perfection* Beet, which is really a perfect and refined root. The best long Beet in cultivation; medium size, rich crimson lake colour, and splendid flavour; foliage shining and dark. Pronounced by the Royal Horticultural Society to be "perfection." Nineteen First Prizes reported in 1903.

In sealed packets, price 15. per packet ; 15. 6d. per ounce.

Ornamental Foliaged Beet.—An interesting species for decoration in the flower garden. The thick fleshy ribs are beautifully coloured either yellow, crimson, cream, or white, and the contrast with the metallic leafage is very effective.

Price 1s. and 1s. 6d. per packet.

Croton-leaved Beet.—A decided acquisition to the group of decorative Beets, the long, narrow, crimson-bronze leaves having an elegant appearance. For the ribbon border, or as a pot plant for table decoration, it is effective. The roots are edible.

In sealed packets, 1s. and 1s. 6d. per packet.

Scakale Bcet.—An improved type of a delicious vegetable, in reality a Beet in which cultivation has developed the leaves instead of the root. It is sown at the same season as Beetroot in April, in rows about 18 inches apart and the plants thinned out to 15 inches apart. At the end of summer they may be lifted as required, the green portion of the leaves cut off and the fleshy stems boiled and served at table with sauce, like Seakale. The wonder is that such a dainty dish should have been permitted to almost drop out of cultivation. Price, 15, per ounce.

For cultural directions, see page 32.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

HINTS ON THE CULTIVATION OF BROCCOLI AND BRUSSELS SPROUTS.

BROCCOLI.

(See next page.)

French-CHOU BROCOLI. German-BROCCOLI. Dutch-SCOTSCHE KOOL.

Italian-BROCCOLO. Spanish-BROCULI.

DESCRIPTION.—A vegetable producing enormous heads of bloom which, in an immature state, are used for eating when cooked or pickled.

Soll .- Rich, and well dug ground produces the best heads

VARIETIES.—These are numerous, and according to quickness or slowness of growth are available from October to June.

How TO Sow .- Either in frames or boxes, or on a sheltered border.

Sowing SEASONS.—February to June. Carters' Autumn Broccoli sown in March will be ready for cutting in October. Winter Broccoli sown in spring will be ready for cutting in winter. Occasionally in November, and at other times about the turn of the new year, Winter Sprouting Broccoli throws out a profusion of loose sprouts, and not one close head like other varieties This feature makes it a delectable dish when green vegetables are very scarce. It will continue in cut from March to May. Spring Broccoli will, in ordinary weather, stand throughout the winter. If sown in March, the heads should be ready to cut the following March or April. Summer Broccoli generally follows the spring variety in maturing its heads. Carters' Mammoth Spring White, a large Broccoli of excellent flavour, is ready from February to April, while Carters' Summer, which resists intense frosts, and Carters' Universal Protecting (the longest standing type we know of) are available for cutting from April to June).

TRANSPLANTING.—When the young plants are transplanted in summer, it is necessary that the tap or main root goes straight down into the hole made for it. Most sorts are placed two feet asunder, both in the rows and between the rows. If the soil has not been rolled, a good treading will materially help the plants when they are put in.

ENEMIES.—Broccoli is frequently ill-used by being planted between rows of potatoes, which, with their strong haulms, quite smother the plants long before their season is reached. Caterpillars often get into the heads, but will quickly come out if it is dipped in salt and water before boiling. Frost sometimes spoils the flowers of the winter and spring varieties, the tops of which should be protected during severe weather.

BRUSSELS SPROUTS.

(See page 38).

French-Chou de BRUXELLES. German-SPROSSEN KOHL. Dutch-SPRUIT KOOL. Spanish-BRETONES DE BRUSELAS. Italian-CAVOLO A GERMOGLIA.

DESCRIPTION.-Grown for the succulent and tender sprouts that form on the stem of the plant as it reaches maturity.

SOWING SEASON.—For the earliest crop, sow the seed in February in a pan or box, in gentle heat, prick out in a frame, harden off and plant out in April. For the main and latest crops sow in March, in cold frames, and in April on a sheltered border. Some market growers sow the seed in August.

TRANSPLANTING.-Set out the plants as soon as they are large enough, in good prepared ground, in rows about two feet apart, giving the plants from 24 to 30 inches space between them in the rows.

GENERAL CULTURE.-Brussels Sprouts like a good rich soil, which must be made very firm to ensure good results.

SEASON WHEN READY.—They are fit for use when the Sprouts get firm and hard, but they are sweeter and more tender after they have endured a few frosts.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1304.

HINTS ON CULTIVATION.

DESCRIPTION .- A useful vegetable of great hardiness. Grown for its leaves and sprouts.

VARIETIES.-The "Welsh" Dwarf and Tall, "Curled," and "Cottager's" are the varieties in general cultivation.

SOWING SEASON.-The seed is sown in March for early winter use, and again in April for succession and late use.

How TO Sow.-Sow thinly in rows in prepared beds.

GENERAL CULTURE AND TRANSPLANTING.—Set out in June and July between potatoes, or in a breadth of ground set apart for the crop. Allow the dwarf varieties from 18 to 24 inches, and the taller from 24 to 30 inches between each plant.

Use.—The Scotch Kales aré largely used in the making of broth. The Asparagus Kale is a delicious vegetable, the spear-like growths being cooked like Asparagus. Most of the other varieties furnish greens by gathering the leaves, and finally the head of the plant. They are considered to eat better after they have had two or three frosts on them.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

CABBAGE.

A greatly reduced specimen, Photographed and Copyrighted by J. C. & Co.

Carters' Mammoth Beefheart. — The largest Garden Cabbage grown. Sown in spring it gives enormously heavy heads during summer and autumn, or when sown in August fine heads may be expected in the early spring. It is much more robust and hardy than many of the small varieties now recommended for early summer use.

In sealed packets, price 1s.; per ounce, 1s. 6d.

TWENTY-ONE FIRST PRIZES REPORTED IN 1902 AND 1903.

For cultural directions, see page 43.

HINTS ON THE CULTIVATION OF THE CABBAGE AND CAULIFLOWER.

CABBAGE.

French—CHOU POMMÉ. German—KOPF KOHL. Dutch—KOOL. Italian—CAVOLO. Spanish—Colrepollo.

DESCRIPTION.-A vegetable grown for its heart and leaves.

VARIETIES.—Shape and colour, with size, and variations in the time required to reach maturity, are the chief distinctive features.

SOIL .--- Strong and well dug.

SEASONS FOR SOWING. - February to April; August and September.

How to Sow.—Sow the seeds thinly in rows 6 inches apart in prepared bcds. If early, the beds should be in a sheltered situation.

TRANSPLANTING.—Small varieties are set out 15 inches apart, larger types 24 inches apart, either between potatoes and other low growing crops, or alone, say after the potatoes are off, to stand according to sort from 15 to 30 inches apart.

IN SEASON.—Spring Cabbage ready about May is produced from seeds sown in August and September. Summer Cabbage is produced from seeds sown in February and March. Autumn Cabbage from seeds sown in April and May. Under a good system of culture, this vegetable can be had all the year through.

ENEMIES.—"Clubbing" is perhaps the worst disease. It is caused by an insect which breeds and thrives in unhealthy over-fed soil, and produces a quantity of knob-like excressences on the roots. The eaterpillars of the white cabbage butterfly and cabbage moth are also very destructive, often completely perforating the leaves in summer and early autumn.

CAULIFLOWER.

French—CHOU-FLEUR. German—BLUMEN KOHL. Dutch—BLOEM KOH. Italian—CAVOL FIORE. Spanish—COLIFLOR.

DESCRIPTION.—A vegetable producing heads of bloom which in an immature state are edible when cooked. Although similar in character to the Broccoli, it matures more quickly, and is much more tender, and comes into season under ordinary culture from July to November. In large establishments it is grown in pots under glass, and brought into flower at whatever season it is most required.

SOIL,—Rich and well dug.

VARIETIES.—Carters' Defiance represents a small but very early heading variety, whilst Carters' Early Autumn Giant has enormous heads.

How TO SOW, AND SEASON WHEN IN CUT.—If small heads are desired in summer the seed of Carters' *Defiance* should be sown in a pan in heat during February, and transplanted into frames in April to form compact heads during summer. The larger varieties, sown in March in a frame or sheltered border, and transplanted in summer, will come into eut in early autumn.

TRANSPLANTING.—See Broccoli.

ENEMIES.—See Cabbage.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904

A GIANT AUTUMN CAULIFLOWER.

Photographed from Nature and Copyrighted by J. C. & Co.-MUCH REDUCED IN SIZE. CARTERS' EXTRA EARLY AUTUMN GIANT CAULIFLOWER.

Carters' Extra Early Autumn Giant.—This magnificent Cauliflower is more dwarf, considerably earlier, and in every respect better than the old *Autumn Giant*. It produces enormous snow-white heads, and is admitted to be the largest and the earliest of the giant forms that are of such value during September and October.

We have records of 101 PRIZES having been won by our Customers in open competition.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

Carters' Defiance Forcing .- (See Photograph.) A very useful variety for frame or pot eulture. In perfection during early summer-a season when a searcity exists in vegetables of this description.

In sealed packets, 25. per packet.

Carters' Early Emperor.-Agiant summer Cauliflower for outdoor work. This grand acquisition has fully answered expectations, and has proved itself the very earliest of all the large Cauliflowers. Its enormous heads are beautifully white.

In scaled packets, 25. 6d. per packet.

THE ROYAL HORTICULTURAL SOCIETY. reporting its trials of Carters' Early Emperor at the Experimental Grounds, Chiswick, says :--" Plants sturdy, producing large, compact, pure white heads of perfect shape."

Carters' Mont Blanc.-(See Photograph.) Magnificent snow-white heads, well protected by the lcaves; one of the best for soils of a heavy or retentive nature.

In sealed packets, IS. 6d. per packet.

Our Cauliflowers were included in the First Prize Collection of Vegetables exhibited at the Vegetable Conference of the Royal Hortieultural Society, 1903. See page 2.

Photographed and Copyrighted by J. C. & Co.-MUCH REDUCED. CARTERS' SOLID IVORY CELERY.

Photographed and Copyrighted by J. C. & Co. - MUCH REDUCED. CARTERS' INCOMPARABLE CRIMSON CELERY.

Carters' Solid Ivory—One of the most remarkable features of Carters' *Solid Ivory* Celery is its extreme dwarf compact habit, and beautiful white colour. If the heads are tied with a little rough matting, the same as with Cos Lettuces, it will assist not only in keeping the Celery perfect, but also to exclude superabundant moisture.

We have records of no less than 105 First Prizes awarded this variety during the past five seasons in open competition. See also Photograph opposite.

In sealed packets, price 1s. 6d. per packet.

Carters' Incomparable Crimson.—A dwarf growing, richcoloured Celery, very crisp eating, and of delicious flavour. Thirty-two Prizes reported in 1902 and 1903.

In sealed packets, price 1s. 6d. per packet.

Standard-bearer.—The finest type of giant Red Celery that we know of. Some grand heads were included in the First Prize Collection of Vegetables at the Conference of the Royal Horticultural Society held in September last. See page 2.

In sealed packets, price 1s. 6d. per packet.

CELERY. CULTIVATION OF THE HINTS ON

CELERY PLANTED IN TRENCH.

CELERY HALF EARTHED UP.

CELERY FULLY RARTHED UP.

CELERY MAGGOT.

DESCRIPTION .- A vegetable, the stems of which are blanched, and either eaten raw or used in stews.

VARIETIES .- Some are white, others pink, and one variety lately introduced is yellow.

Soil .- Strong, rich, and deeply dug.

SEASON FOR SOWING -From January to March.

How to Sow .- In pans or boxes stood in a heated frame or house if wanted early, or in a cool frame in an ordinary way.

AFTER CULTURE .- The seedlings may either be transplanted about March, 4 inches apart in boxes, or direct to a sheltered border in April, and from here they are set into permanent quarters about June and July according to their forwardness. The trench for the final reception should be made 12 inches deep, and filled in with some well decayed manure, mixed and topped with soil until within 6 inches of the surface level; when consolidated with the feet, the young plants are set therein about 9 inches apart, either in one or more rows, and kept well watered during hot weather, and earthed up gradually as the season advances, so that by November nothing is visible but the tips of the leaves.

ENEMIRS.—The maggot of a fly is terribly destructive during the summer. It commences its career on the leaves by eating its way into the tissues, and as it matures it often finds its way down the stems. A peppering of lime and soot over the plants when covered with dew in early morning often checks it. Cutting off those leaves which are affected and burning them is also recommended.

Wireworm often disfigures the stems. This pest can be checked by sprinklings of soot about the plants as they are growing.

CELERIAC (or Turnip-rooted Celery) is a Continental variety, in which the stems form an irregular knob. It is becoming more popular in this country, owing to the more frequent contact nowadays of the English people with foreign dishes, of which this is a common one. Sceds should be sown in pans in March, and the plants set out in shallow trenches to mature.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

FRAME CUCUMBER.

Photographed from Nature and Copyrighted by J C. & Co. CARTERS' MODEL CUCUMBER, growing at our Forest Hill Nurseries for Seed.

Carters' Model is one of the handsomest Cucumbers grown, embodying the fine form and general characteristics of *Tender and True* with the prolific habit and strong constitution of the *Telegraph*. Perfect in outline, with scarcely any neck, and of fine flavour, this variety has become popular, both for exhibition and table purposes.

In scaled packets, 2s. 6d. and 3s. 6d. per packet.

TWENTY-ONE FIRST PRIZES HAVE BEEN REPORTED BY CUSTOMERS IN 1903.

FRAME CUCUMBER.—Continued.

Carters' Earliest of All.—Has produced perfect fruit in a trial nine days in advance of all others. It is of good colour, and handsome form.

In sealed packets, 2s. 6d. per packet.

Carters' Royal Osborne.—This grand introduction of ours has now become thoroughly established and is likely to become as famous in the dark-fruited section as *Telegraph* is in the light-fruited elass. It was represented in many First Prize Collections during the past year, and for the second time gained the FIRST PRIZE at the Royal Caledonian Society's Exhibition in 1902, beating twelve others. As an all-the-year-round variety the professional gardener will find it absolutely the best. It has little or no neek, therefore no waste. Six First Prizes reported in 1903.

In sealed packets, 2s. 6d. and 3s. 6d. per packet.

Carters' Ideal.—Raised by that ehampion cultivator, Mr. E. Beckett, head gardener to the Rt. Hon. Lord Aldenham. It is quite an aristoeratie variety, both in colour, size, and flavour.

This grand Cueumber was included in the First Prize Collection of Vegetables exhibited at the Vegetable Conference of the Royal Hortieultural Society, September, 1903.

In sealed packets, 2s. 6d. and 3s. 6d. per packet.

Carters' Cardiff Castle.—Awarded a Cultural Commendation by the Royal Hortieultural Society. The fruit is of a rich emerald colour, perfect in form, growing to a length of about 18 inches. It is remarkably free-bearing, producing three to four fruits at a single joint. A very valuable variety where only one is grown.

In sealed packets, 2s. 6d. per packet.

Carters' Improved Telegraph,—Unquestionably one of the best winter Cueumbers; indispensable for foreing.

HINTS ON THE CULTIVATION OF CUCUMBER.

DESCRIPTION.—A succulent plant, the fruits of which are cut green for eating in pieces or cut up in salads.

VARIETIES .- These vary in the size, prolific features, and shades of green in the fruit.

SEASON FOR SOWING. - January to May, according to the season when the fruits are expected. In some large establishments they are in eut all the year round.

How TO Sow.—In pots or pans composed of rich soil, about one inch under the surface, and lightly covered in. Stand on a hot bcd or on a shelf in hcat. When in fourth leaf pot the seedlings separately, and they will quickly reach a stage large enough for planting in a house on a prepared loamy bed to run up the trellis, or set out in a frame at the end of May. The seed of outdoor varieties may be sown in May, on a raised bed where the plants will stand. If a hand-light is put over the seed it will quickly germinate.

AFTER TREATMENT.—Although this plant likes plcnty of moisture at the root, it must not be overdone. A humid atmosphere during hot weather encourages a quick growth, but in dull, cheerless weather the house should be kept drier

ENEMIES AND DISEASES.—If kept too dry in hot weather the leaves soon become infested with red spider, which is a very troublesome pest that spreads quickly. In cold weather mildew often attacks the leaves when the temperature of the house varies. Eelworm and wireworm will sometimes eat into the stem from the roots. Syringing is a check to red spider, sulphur sprinkled on the leaves for mildew. It is difficult to get rid of the worms, as they commit their depredations out of sight.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .-- 1904

Photographed and Copyrighted by J. C. & Co.-REDUCED IN SIZE.

Carters' Holborn Model.—(*See Photograph.*) The best both for exhibition and table. The stems are remarkably long and solid, of the clearest white colour, whilst the flavour is exceedingly delicate. One hundred and thirty-six First Prizes have been reported by customers.

In sealed packets, 2s. per packet.

"I send photo of your Leeks. They have taken TWO FIRST PRIZES, ONE SPECIAL PRIZE, at Leek and District Show and at the Old Original Show. I may say Five First Prizes have been taken from one trench. "J. R., Staffs."	A GREAT WIN. Over 50 varieties of our Vegetables were included in the First Prize Collection exhibited at the Vegetable Conference of the Royal Horticultural Society, September, 1903 See Illustration, page 2.

Per pkt. Per oz.

HINTS ON THE CULTIVATION OF LEEK AND ENDIVE.

LEEK.

French—POIREAU. German—LAUCH. Dutch—PREI.

Spanish-PUERRO.

DESCRIPTION. - A vegetable related to the Onion, the blanched stems of which are cooked and caten.

VARIETIES.—Some have long stems, others short and thick. The long-stemmed variety is preferred in some districts, and the short-stemmed is generally considered best on shallow soils.

Soil. This eannot be too rich or too deeply dug.

How AND WHEN TO Sow.—When required for exhibition purposes, the seed is sown very early in the year (January), in boxes, and the seedlings potted off singly, so that by the time they are put out in the trench in spring they are quite large plants; otherwise they are sown in March, in a frame or bed out of doors.

Italian-PORRO.

LEEK IN TRENCH EARTHED UP FOR BLANCHING PURPOSES.

TRANSPLANTING.—This takes place during early summer, when the young plants may be set into a trench similar to that prepared for celery, about 9 inches apart, or they may be dibbled into holes in a rich piece of soil about 6 inches apart in zigzag rows. They are just tightened into these holes up to the leaves and well watered, and will soon come along and make quite useful stuff by winter.

ENEMIES.-Very few vermin seem to interfere with this erop.

ENDIVE.

French-Chicovée. German-Endivie. Dutch-Andijvie. Italian-Indivia.

Spanish—ENDIVIA.

DESCRIPTION.—A fine vegetable mostly grown for salads, for which the blanched hearts are greatly estcemed.

VARIETIES.—There are two types—the plain leaved, or Batavian, and the curled, the latter being the one usually cultivated in England.

TIME OF SOWING.—Seed may be sown in spring for producing an early crop, and again in summer for the main and late crops.

How to Sow.—Sow in drills in good rich soil, about 12 inches apart, and thin out to about the same distance in the rows. When the plants have reached a fair size they require to be blanched, which may be done by tying them up closely with bass, or else by placing a flower pot over each plant, choosing a dry fine afternoon for the operation, for if covered when wet it is likely to damage the growth. Some lay a large slate over each plant, which soon eauses the growth to turn white.

Carters 237, 238, & 97, 111GH HOLBORN, LONDON.-1904.

HINTS ON THE CULTIVATION OF THE MELON.

French-MELON. German-MELONE. Dutch - MELOEN.

Italian—POPONE. Spanish—MELON.

DESCRIPTION.—A climbing plant greatly esteemed during summer, although its luseious fruits are obtainable by special culture all the year round.

VARIETIES.—The fruits have green, searlet, white, or cream coloured flesh, all of which have their favourites.

Sowing Season. From January to June, according to the time of year when the fruits are required.

How SOWN AND TRANSPLANTED.—Three or more seeds are put into a pot during the winter or spring, half filled with rich soil, which should be made moist, and plunged into bottom heat until the seedlings start to grow. Then give more air, and as soon as in third leaf they may be potted singly and stood on an airy shelf, but they grow more quickly in a moist atmosphere. *See Cucumber Culture, page* 52.

AFTER TREATMENT.—If wanted for house culture, the plants must be set out in heaps of soil, or on a bed of a nice loamy material, standing about 3 feet apart, and trained up to a wire or wooden trellis. If for frame culture, a raised bed in the centre of each light should be made, and one or more plants put into it during May. The growth will spread about, and the fruits when commencing to swell should have a piece of tile put underneath them, or lay on an inverted flower pot, when the bed is too rich.

ENEMIES.—Damp through being kept to close, mildew through sudden changes from heat to cold, and red spider through being too dry are the worst pests. Sometimes the plant suffers from the depredations of the wireworm and celworm, when the bed is too rich.

Carters 237, 238, & 97, 111GH HOLBORN, LONDON .-- 1904.

THE BEST SCARLET-FLESH MELON

IS CARTERS' BLENHEIM ORANGE.

Photographed from Nature and Copyrighted by J. C. & Co.-REDUCED IN SIZE. CARTERS' BLENHEIM ORANGE MELON.

The finest flavoured and most popular scarlet-flesh Melon in cultivation.

We introduced this fine Melon many years ago, and we still claim it to be the finest scarlet-flesh Melon in cultivation.

Carters' Blenheim Orange Melon.—We again offer the stock of new seed, saved specially for us. This Melon is remarkably prolific, has a grand constitution, is a very fine setter, and may be described as a perpetual bearer, ripening in a short space of time. The fruit is superbly netted, the flesh deep and solid, and a special and distinctive feature is the evenly-defined and thin rind. Five First Prizes reported in 1903.

In sealed packets, price 2s. 6d. per packet.

For cultural directions, see page 55.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

THE BEST GREEN-FLESH MELON

IS CARTERS' EARL'S FAVOURITE.

AWARDED A FIRST CLASS CERTIFICATE, ROYAL HORTICULIURAL SOCIETY.

Carters' Earl's Favourite Melon. - The finest flavoured green-flesh Melon in cultivation. Is a strong grower, free setter, and may be said to be "eanker-resisting." It does quite as well in cool frames as in the houses. Some finely-finished fruits were exhibited before the Fruit Committee of the Royal Horticultural Society at the Great Show held at Chiswick Gardens, and unanimously awarded the coveted distinction of a First-Class Certificate, the highest honour that the Society can bestow. In sealed packets, 25. 6d. and 3s. 6d. per packet.

Carters' Holborn Favourite.-Fruit of the largest size, roundish ovate; rind lemon colour, heavily netted; flesh, greenish-white; flavour, sweet, melting, and juiey; habit of plant, strong and vigorous; a free setter and a great In sealed packets, 2s. 6d. per packet. bearer.

Carters' Green Gage .- A "perfect" green-flesh Melon ; flavour delicious. TYPE OF FRUIT. In sealed packets, 15. 6d. and 25. 6d. per packet.

Carters' Amberwood Beauty .- A very handsome green-flesh Melon, the result of a cross between Hero of Lockinge and Read's Scarlet Flesh.

In sealed packets, 2s. 6d. per packet.

Carters' Emerald Gem.-Very prolific. In sealed packets, 25. 6d. per packet.

THE BEST WHITE-FLESH MELON IS CARTERS' BRITISH QUEEN.

Awarded a First Class Certificate, Royal Horticultural Society. RAISED AT THE ROYAL GARDENS, WINDSOR.

Photograph of the Crop growing in the Royal Gardens, Windsor.

TYPE OF FRUIT.

CARTERS' BRITISH QUEEN.

This grand cream-flesh Melon is a cross between *Hero of Lockinge* and *Royal Ascot*, and was awarded the First-Class Certificate of the Royal Horticultural Society. Pronounced by the Committee to be the very best flavoured white-flesh Melon ever submitted. Also awarded a Gold Medal, Royal Caledonian Horticultural Society, in association with other fruit exhibited from the Royal Gardens, Windsor.

In sealed packets, price 25. 6d. and 35. 6d. per packet.

For cultural directions, see page 55.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

HINTS ON THE CULTIVATION OF THE ONION.

French-OGNON. German-ZWIEBEL. Dutch-UIJEN. Italian-CIPOLLA. Spanish-CEBOLLA.

DESCRIPTION. - A useful vegetable, grown for its bulbs, which are caten raw or cooked.

VARIETIES. — These vary in size, shape, and colour, some being hardier than others, and stronger flavoured.

SOWING SEASON.—In August for giant Onions next summer. In spring for summer and autumn erops, and also for pickling Onions. What are called Spring Onions can be sown at any time.

How to Sow.—In rows or beds where intended to mature, using the thinnings as gathered for eating. The drills are usually 9 inches apart.

TRANSPLANTING. — The summer sown onions are generally transplanted in November or March, about a foot apart, to finish their growth.

ONIONS THAT HAVE BEEN THINNED.

THE ONION FLY AND MAGGOT.

ONIONS THAT HAVE NOT BEEN THINNED.

GENERAL TREATMENT.—The soil should be firm, not too heavy or too rich, and the bulbs should be near the surface. An oceasional watering with liquid manure is often an advantage during dry weather. Neeky Onions are invariably eaused by errors in eultivation.

ENEMIES.—The Onion Fly is perhaps the worst pest. It lays eggs on any exposed part of the plant, and the maggots often eat their way down into the heart of bulb, with the result that the plant perishes. It seems most prevalent on rich soil.

REMEDIES. -- Spraying in early summer with some bitter liquid, such as quassia chips will make, or damping the plants and then sprinkling pepper over them, has been found beneficial.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

ONIONS FOR SPRING SOWING.

Photographed and Copyrighted by J. C. & CO.-MUCH REDUCED IN SIZE. A FINE CROP OF AILSA CRAIG ONION.

AILSA CRAIG.—Carters' Rc-selected Strain. (See Photograph above.) We offer a very fine strain of this popular Onion, which, on account of its distinct shape, is in great demand amongst exhibitors of vegetables. It is a good keeper, and to those who like an Onion raw, we recommend it on account of its acceptable pungent flavour. Suitable for autumn or spring sowing. Thirty-five First Prizes reported in 1903.

In sealed packets, price 25. 6d. per large packet.

CARTERS' HOLBORN.—Equally valuable for exhibition and for table purposes. Perfect in shape, is grows to a large size, and is distinct in colour of skin from other Globe varieties. It is a capital keeper, and the delicate flavour nearly approaches that of the imported Spanish Onions sold by grocers and fruiterers. We hold records of Six First Prizes in 1901. May also be sown in the autumn.

In sealed packets, price 15. 6d. per packet.

Carters' Tennis Ball.—This magnificent Onion is specially adapted for early sowing; the flavour is mild and delicate, and as an exhibition variety in summer it is invaluable.

In sealed packets, price 15. 6d. per packet.

Carters' Pearl Pickler.—This is the genuine miniature Onion that is preserved in white vinegar, and found on the tables at the leading hotels.

In scaled packets, price 15. per packet.

Carters' Long Keeper .- Will remain sound the year round if properly kept.

"I an sending some examples of your Long-keeping Onion, grown in 1900, and it is now October 5th, 1901. Gardeners about here hardly believe it."-J. L., Blackheath.

In sealed packets, price 15. 6d. pcr packet.

For cultural directions, see page 59.

ONIONS.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

Photographed and Copyrighted by J. C. & Co.

As Grown by our Customer, J. W. Green, Esq., Luton. Mr. G. Read, Gardener.

- **Carters' Record Onion** increases in favour each season, and is already exceedingly popular. It can be sown either in the autumn or spring; but if large Bulbs are desired, autumn sowing is recommended. It will be remembered that a specimen, illustrated in the *Gardening World*, turned the scale at $4\frac{1}{2}$ lbs.; this was probably the heaviest Onion ever grown. See Coloured Photograph opposite.
- We regret we cannot find room in this Catalogue for the large number of letters that reach us every season regarding successes with this grand Onion. Here are some that have come to hand recently :---
 - **Record** is the best Onion I have ever grown. For the last five years I have taken First Prize."

62

Mr. J. RHODES, Kirkhammerton.

- "I had a grand lot of **Record Onions**, some weighed 1³/₄ lbs." Mr. T. WAY, Salisbury.
- "Record Onion won the First Prize this year, beating another variety that has always secured it before."

Mr. H. BOTT, Pytchley.

"Record Onion was the largest in the Show; 14 weighed over 26 lbs." -

Mr. W. BROOM, Axminster.

In sealed packets, price 2s. per packet.

We hold records of 165 First Prizes having been gained by Customers.

CARTERS HOLBORN STANDARD LETTUCE.

In sealed packets, price 1/6 each. For partic

For particulars see opposite page.

We grow several hundreds of varieties of Cabbage Lettuces in our experimental grounds every year to test their respective merits, and unhesitatingly pronounce Carters Holborn Standard to be the very best in its class. The demand was so large last year that we were completely sold out long before the sowing season was over.

CABBAGE LETTUCE.

Holborn Standard.—(See Coloured Photograph facing.) A Lettuce of extraordinary NEW Size and duration. It forms well-developed heads in its early stages and is one of the very last to start for seed. Its leaves are crumpled and crisp, while it is very tender and of excellent flavour, and will provide an abundance of salad during the hottest of English summers.

In sealed packets, price 15. 6d. per packet.

Carters' Perpetual.—Award of Merit, Royal Horticultural Society, July 18, 1902. This is a large handsome Cabbage Lettuce, equally suitable for forcing and for open ground. Its great attraction to us is its resistance to drought. It produces very fine heads of a lively green colour and retains its crisp and tender flavour to the last, its decply crumpled leaves giving it great substance.

In sealed packets, price 1s. 6d. per packet.

THE ROVAL HORTICULTURAL SOCIETV, reporting its trials at the Experimental Grounds, Chiswick, says :—" Foliage beautifully curled ; a fine stock."

Carters' Harbinger Forcing.—A valuable and distinct addition to the class of early salading Lettuces.

In sealed packets, price 1s.; 1s. 6d. per ounce.

Carters' Longstander.—A distinct and valuable variety. From its peculiar habit of growth it is less liable to decay and damage than any other cabbage variety. The colour of the lcaf is pale green, and of the most delicious flavour.

In sealed packets, price 1s. 6d.; 2s. 6d. per ounce.

Carters' Endive-Leaved.—This Lettuce is quite distinct. Its leaves are deeply serrated and laciniated, which gives it the appearance of Endive—indeed, a prominent gardener suggested that it might be used in early summer salads, and few could tell but that it was Endive. In scaled packets, price **1s. 6d.** per packet.

THE ROVAL HORTICULTURAL SOCIETV, reporting its trials at the Experimental Grounds, Chiswick, says :—" Leaves beautifully cut and divided ; a very handsome variety."

Carters' Round-Leaved.—A hardy flat-shaped variety that can be sown at almost any season. In sealed packets, price 1s. 6d. per packet.

Carters' Green-Fringed.—Of a very delicate and peculiar shade of green, inner parts of the leaves being white : the edges are prettily fringed.

In sealed packets, price 1s. per packet.

HINTS ON THE CULTIVATION OF LETTUCE, SALSAFY, AND SCORZONERA.

LETTUCE.

DESCRIPTION.-A popular vegetable, the leaves and heart of which are eaten as a salad.

SOIL.—Fairly rich, and deeply dug. The quicker the plants mature, the more succulent and crisp eating they are.

VARIETIES.—The Cos Lettuce is mostly of upright growth, with a close heart, crisp and blanched, very fine in summer, although some are hardy enough to stand the winter. The cabbage or flat lettuces arc of a softer texture and preferred by some, but these points are quite a matter of taste—each section has its patrons.

Sowing SEASONS.—In gardens where heated houses and frames are available, lettuce in one form or another is to be had all the year round, but in ordinary gardens without artificial culture, its season ranges from June to November, the seed being sown at intervals from April to August, the seedlings being transplanted six inches apart.

ENEMIES.--During the young stages out of doors, the little plants are often attacked by slugs, but when advanced they do not suffer much from vermin. Under glass they sometimes get infested with green fly, which is got rid of in washing the heads when cut.

SALSAFY AND SCORZONERA,

DESCRIPTION.—These arc excellent vegetables, not largely grown in this country, but greatly esteemed on the Continent. Salsafy has long white roots, Scorzonera black skinned ones, otherwise they belong to the same family.

CULTIVATION.—Prepare the bed in autumn by trenching deeply, and manure well by placing a layer at the bottom of the trench. Sow the seed in drills from 12 to 15 inches apart on a fine tilth, in April or May, and thin out to about six inches apart. Lift the plants in the autumn and store in sand, taking care not to break the roots.

Photographed from Nature and Copyrighted by J. C. & Co. CARTERS' CRESTED BOUQUET PARSLEY.

Carters' Crested Bouquet.—(*See Photograph.*) A Parsley of very attractive appearance, both in the garden and on the table; of very dwarf compact growth, all its strength being thrown into the exquisite curls of its leaves, giving it a pretty crested appearance.

In sealed packets, 1s. 6d. per packet.

Carters' Fern-Leaved.—Exquisitely perfect in form and colour ; quite fern-like. In sealed packets, 1s. per packet ; 1s. 6d. per ounce.

Carters' Perpetual.—A distinct and valuable curled variety that does not annually run to seed. It has stood with us upon the same land *for four years before seeding*.

In sealed packets, IS. per packet ; IS. 6d. per ounce.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

HINTS ON THE CULTIVATION OF PARSLEY AND PARSNIP.

PARSLEY.

French-PERSIL. German—PETERSILIE. Dutch-PIETERSELIE. Italian—PREZZEMOLO. Spanish—PEREJIL.

DESCRIPTION .- A plant grown for its leaves, which are used as a decoration to dishes, or chopped up into sauce.

VARIETIES .- These vary in degree of curliness in the leaves, some of which are very mossy.

Sowing SEASONS.- A Parsley bed should be sown every spring on a nice, but not over-rich, soil, and where a quantity is required, again about July. The seeds should be scattered about, raked in, and the surface pressed in.

GENERAL CULTURE.-It is easy to have Parsley through the summer, but it is often missing in gardens during winter, just when most needed. For winter use, the bed should have the protection of a glass frame, which will keep it fresh and in growth through the cold season. All flowering spikes that appear during summer should be promptly cut out. The leaves from young plants are much nieer than those taken from worn-out plants.

PARSNIP.

French-PANAIS. German – PASTINAKE. Dutch-PINKSTERNAKEL.

> Italian-PASTINACA. Spanish—CHIRIVIA.

PARSNIPS IN BADLY DUG SOIL.

DESCRIPTION.—A vegetable grown for its root, which is cooked and eaten.

VARIETIES .- These vary in shape and flavour.

SOWING SEASON. - At the end of winter and during early spring is the best time to sow the seed, in rows 15 inches apart. The seedlings should be thinned out to 12 inches apart.

GENERAL CULTURE.—Deeply-dug ground is an important factor in the successful growth of Parsnips, as the tap root will often go

WELL GROWN PARSNII'S IN DEEP RICH SOIL,

down several feet, and if this is checked the body may assume an ugly shape. Lift as needed during winter. The roots retain their flavour in a better degree if not taken up until required for cooking. Cover with straw at the approach of frosty weather to keep the ground from getting hard.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

Photographed and Copyrighted by J. C. & Co. CARTERS' EXTRA EARLY SCARLET TURNIP RADISH. Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

EARLY RADISHES.

Carters' Delicatesse. — (See Photograph.) An attractive breakfast dish. Its crisp flesh and nutty flavour gives this new selection a distinct advantage. Suitable for forcing.

In sealed packets, price **3s. 6d.** per pint, **8d.** per ounce.

Carters' French Breakfast.

-There are so many inferior strains of this very popular Radish (introduced by our house from Paris years ago) that we recommend all connoisseurs of a fine appetising breakfast dish to grow only our own selected type.

Price 2s. 6d. per pint, 6d. per ounce.

Carters' Express.—Quite distinct in form and colour, being very much brighter than *Wood's Frame* or *Long Scarlet.* In appearance, crispness, and flavour it is a long way ahead of any other variety for *earliest* work.

In sealed packets, price 3s. 6d. per pint, 8d. per ounce.

FOUR DISTINCT RADISHES.

Photographed and Copyrighted by J. C. & Co.

Carters' Triumph.—(*See Photograph, No.* 1.) A new turnip-shaped Radish, mottled and striped. This is an altogether novel feature in Radishes; they are prettily mottled and splashed with carmine on a delicate white flesh, which makes them, when on table, as attractive to the cye as they are to the palate. Pri.e in sealed packets, **IS.** per packet.

Carters' Long Forcing Scarlet.—(S:e Photograph, No. 4.) A great advance on the old varietics. The very best long scarlet Radish for early work. Fresh, erisp, and tender.

Price in sealed packets, 15. per packet.

The lcicle.—(*See Photograph, No.* 3.) So named because of its unique transparent whiteness, attractive ar pearance, and freshness in the early summer. The earliest long white Radish, of extraordinary Price in sealed packets, **15.** per packet.

Carters' Crimson Olive.- (See Photograth, No. 2.) A great improvement on the old crimson oliveshaped variety. The contrast is as attractive to the eye as the sweet delicate flavour is to the palate.

For full cultural directions, see page 73.

Price in sealed packets, 15. per packet.

Garters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

HINTS ON THE CULTIVATION OF RADISH AND SPINACH.

RADISH,

French—RADIS. German—RADIES. Dutch—RADIJS. Italian—RAVANELLO. Spanish—RABANITO.

DESCRIPTION.—A salad vegetable, the roots of which are either eaten whole or cut into sliees.

VARIETIES .- These vary in shape, size, colour, and texture.

SOWING SEASONS.—Radishes are available all the year round. The autumn and winter sowings are made in frames; the spring and summer sowings out of doors.

How to Sow. -- It is customary to sow broadcast and not in rows or drills.

GENERAL TREATMENT.—A rich, well-drained soil, fairly firm and plentifully supplied with water in hot weather, are the best conditions for this crop, which should be grown quickly, or the roots will be hot and pithy.

ENEMIES.—Beyond perforated leaves resulting from an insect, there is not much which affects this crop. The remedy is similar to that recommended for Turnips.

SPINACH.

French-Epinard. German-Spinat. Dutch-Spinazie. Italian-Spinaccio. Spanish-Espinaca.

DESCRIPTION. -A vegetable, the leaves of which are cooked and eaten when freshly gathered.

VARIETIES .- These vary in degrees of hardiness and succulence of the leafage.

Sowing SEASONS.—If wanted in winter the crop should be grown under glass in a frame. Sowings made in April and repeated at intervals of three weeks, more or less, according to requirements through the summer, will give gatherings up to November.

How to Sow.—The seed is sown in lines about 15 inches apart, and the plants are either thinned out, the thinnings being used, or a portion of the row may be lifted as needed. In large establishments the leaves only are picked, and successional pickings are taken from the row

GENERAL TREATMENT. - Spinach grows strongest on a fairly rich soil, but soon runs up to seed on a poor thin soil. The plant is then useless, and should be burned or thrown away.

ENEMIES.—Very few pests seem to affect this crop, although we have seen plants attacked by wireworm and slugs which have perforated the neck during cold wet weather. A sprinkling of soot is helpful in such cases.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. -- 1904.

SPINACH.

Included in the First Prize Collection, Royal Horticultural Society, September, 1903.

Photographed from Nature and Copyrighted by J. C. & Co.

THE CARTER SPINACH.

The Carter Spinach.—(See Photograph.) This fine Spinach was sent for trial to the Royal Horticultural Society, and was given an Award of Merit. Our photograph illustrates in a remarkable manner the solid substance of the leaves; and the whole plant, which is very fine in colour, is of far greater duration than ordinary Spinach.

In sealed packets, price 2s. 6d. per pint; 6d. per ounce.

CULTURAL DIRECTIONS.

Mustard and Cress.—Two of the most popular salad plants in cultivation, being in season all the year round. They are both cultivated in a similar manner.

CULTIVATION.—Use boxes of good fine soil, make the surface flat, and sow the seed rather thickly over the top, just pressing it in to the surface, but without using any covering material. After sowing, water it well. Place the box in moist heat, and cover with boards or thick paper until the seed germinates. Use shallow boxes half filled with soil. Frequent successional sowings should be made all the year round. Good results may be obtained out of doors in the summer by preparing beds of fine soil in the same way as recommended for boxes, and covering the seed when sown with boards or mats until it germinates.

Use. - Cut as soon as ready with a sharp knife. See illustrations above.

Watercress may be successfully grown if sown in rows in a shady border and well watered.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

SALAD PLANTS.

Photographed from Nature and Copyrighted by J. C. & Co.

SOME OF THE INGREDIENTS OF A GOOD SALAD.

The delicious Salads that are so popular on the Continent are only found on English tables upon rare occasions. The eultivation is so simple, and the preparation for table less so, that the extended growth of such healthy food is strongly recommended.

SALADS ALL THE YEAR ROUND.

Modern lists of vegetables contain few subjects more generally acceptable, or which are more easily grown or obtainable than are the several crisp and piquant forms of which salad plants are comprised. Of easy culture, they can, with very limited space, outlay of labour, time, or money expended for seeds, be grown by all. It is, however, a singular fact that in this country good salads are only obtainable and seen in real excellence in the large eities, and are seldom met with in surburban gardens, while on the Continent they are one of the most important of all erops, and considered a necessity on every table. Yet, we repeat, they may be cheaply and expeditiously produced if a proper system be favoured. Kitchen gardening in underate or small spaces is often too complex; too many things are expected from a given area of ground; the consequence is that minor subjects (and these, in a general way, include salads), suffer. Most gardens possess, upon one or more sunny aspeets, a strip of ground, either in form of wall-border or divisional ''quarters." This, be it six or nine fect wide, should be entirely set apart for salad-growing, and no matter what the length may be it may be so arranged as to give erops in bulk or quantities, more or less according to the requirements.

More seeds are wasted and erops destroyed in the numerous attempts which are made in growing these than in connection with other eulinary vegetables. This we can best neutralise by describing how a piece of ground as suggested should be treated. First prepare the space, in part or whole, by digging and manuring, then divide it into as many parts as there are varieties of salad to be grown. Commencing in early spring, transplant a breadth each of autumn-sown seedling Lettuces (hardy cabbage and brown cos) and Endive. About the first week in March sow also seeds of Radishes, like Carters' *Delicatesse* and *Crimson Marble*, and of the two Lettuces already named and also *Curled Endive*, in drills. So soon as the three latter are up and the plants large enough to handle, transplant a few rows of each, and thin out such as are to remain on the seed bed to good distances apart. Again sow seeds of Carters' *Giant White Cos* and all the finer summer Lettuces (including *Jumbo* and *Harbinger*) and *Model Endive*, so soon as the first signs of active growth are seen in the former erops; sowing Radishes once in every three weeks during the remainder of the summer, and Lettuces about once every twentythree days. Sow thinly and water earefully after sowing.

It is important that every seed bed be well thinned out immediately the plauts are large enough. Endless are the erops of these things that are entirely wasted owing to the want of this simple process. Cos Lettuce should be carefully tied up as soon as the heart begins to turn in, so that they may be nicely blanched. Endive should be tied up, or else a flower pot should be placed over each plant as soon as it is large enough, choosing a bright dry afternoon for the operation.

Towards autumn, or say after the month of August, sowings should cease, and then as much Lettuce and Endive should be transplanted as possible. These will form nice hearted crops, which, as regards all the forwardest, must either be taken up and planted very closely in cold pits or frames, or have some kind of protection placed over them to ward off and keep out the frost. The Endive, if tied up and placed in a shed, with its roots in soil and its head kept dry, will afford good white salad indefinitely, according to the quantity stored. Pits containing saladings should be afforded all the air possible when severe frosts do not prevail. From the first week in May, Mustard and Cress should be sown out of doors on a warm border as needed until the beginning of October, and during the rest of the year in shallow pans or boxes under glass every week, using rich finely sifted soil. To produce white or blanched leaves for winter use, sow seeds of Chicory or Witlef in rows in the open ground, alongside and in the same way as Beetroot. One-fifth of Chicory will suffice in conjunction with what may be called the usual crop of Beetroot. The ground should be deeply dug and well manured.

In the autumn lift the roots and put them in boxes or large pots of sandy soil, water well and stand in a dark place, such as a warm mushroom house or cellar, and in a few weeks nice heads of well-blanched leaves will be ready for use. A succession can be kept up through the winter by putting in a fresh batch every few days according to the demand. The roots may be lifted and wintered together with the Beet erops.

The Beet crop is a most important one, and the roots when properly cooked are a most welcome addition to the salad bowl. By growing the most improved varieties they can be had all the year round. The Dandelion is another very useful and succulent salad plant, and should be grown and treated in the same manner as Chicory. It is said to be one of the most wholesome of all plants used for this purpose.

Corn Salad is very little grown in this country, though of the easiest culture. It is in great demand in France in lieu of Lettuce in winter and spring. When Endive is scarce it is of great service. It should be sown in boxes in gentle heat, or in a warm frame for early use, and in rows in the salad border in the spring and summer.

The American Cress is useful for standing the winter, and should be sown in August.

By carrying out the foregoing suggestions, and well manuring the ground between the crops, a constant supply may be kept up all the year round.

Warters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

TOMATO. CARTERS' DUKE OF YORK.

Awarded the First-class Certificate of the Royal Horticultural Society and Four Silver Medals, and included in the First. Prize Collection, Royal Horticultural. Society's Great Autumn Show, 1903.

103 FIRST PRIZES REPORTED to us by Customers.

CARTERS' DUKE OF YORK. — We have now considerably improved this, the grandest Tomato ever introduced. Colour rich scarlet, splendid cropper, almost globular in shape; flesh very firm, fine flavour. A leading feature of this superb variety is that it ripcns its fruit more uniformly than any known kind, whilst the profusion of clusters, averaging six and ten large evenly-formed fruit each, makes it conspicuously handsome. Invaluable as an exhibition variety as for private growers and market purposes.

Photographed and Copyrighted by J. C. & Co.

In sealed packets, price 25. 6d. and 3s. 6d. per packet.

For cultural directions, see page 80.

TOMATO. - Continued.

Photographed and Copyrighted by J. C. & Co.

CARTERS' OUTDOOR TOMATO IN HER ROYAL HIGHNESS THE DUCHESS OF ALBANY'S GARDEN.

Carters' Outdoor Tomato .- The best for culture in the open air, and a long way ahead of others. The annexed photograph will give a good idea of its prolific character, together with the very fine appearance of the individual fruits when grown firstly under glass and the frames ultimately removed-a eapital plan to hasten along the growth for early fruiting. This variety readily fruits under the warmth of a south wall, or along the front of a greenhouse, in any

situation where the full influence of the sun is felt.

In sealed packets, price 25. 6d. pcr packet.

Carters' Perfection .- Quite distinct from, and immeasurably superior to any other variety named Perfection already in commerce. It is very handsome in form, somewhat resembling Dedham Favourite, but very distinct in colour, exceedingly prolific, and of exquisite flavour. Thirty-five First Prizes reported in 1902 and 1903.

In sealed packets, price 25. per packet.

Carters' Blenheim Orange.- We raised and introduced this extraordinary Tomato, a eurious cross between the red and yellow. In colour the fruit may be described as like the setting sun-a happy combination of translucent scarlet and yellow. Gathered when quite ripe they are luscious and juicy, and the nearest approach to the flavour of a plum. It contains but very few seeds, a point in its favour as a dessert fruit. In sealed packets, price 2s. 6d. per packet.

CARTERS' SANDWICH ISLAND. - A most distinct variety, size, good shape and colour. It possesses remarkably unique in form, colouring, and general character. free setting properties. In sealed packets, price 15. 6d. per packet. CARTERS' DEDHAM FAVOURITE. —A well-known and In sealed packets, price 2s. per packet. CARTERS' GREENGAGE. Introduced by us, and the first of the golden section of any value. Awarded deservedly popular variety. In sealed packets, price 2s. per packet. HINTS ON THE CULTIVATION OF TOMATO.

French-TOMATE. German-LIEBESAPFEL ODER TOMATE. Dutch-TOMAAT. Italian-POMO D'ORO. Spanish-TOMATE.

DESCRIPTION.—A cultivated plant, the fruits of which are either gathered green for pickling, or ripened on the branches to be eaten raw or eooked.

VARIETIES.—These are numerous. Some have yellow fruit, others searlet, the latter being the most popular. In some the fruits are corrugated; in others as smooth and round as a ball.

SOWING SEASONS.—If the fruit is wanted early, the seed should be sown in January. If the plants are for outdoor culture they may be sown up to the end of March, but the forwarder the plant is the quicker it will fruit when put out.

How TO Sow.—In a pan composed of three parts loam, one part leaf mould, one part silver sand, and stood either on a hot bed, or on a shelf in a heated house. The seed should be sown thinly, and just covered.

AFTER TREATMENT.— As soon as four leaves show, pot each plant into a 6o-size pot, stand in a light airy place, and keep well watered. In about six weeks they should require potting again into a 48-size pot. From this size they may either go into 24-size pots or boxes for fruiting under glass, or transferred at the end of May to a warm sunny spot out of doors. They should be sturdy and robust, not long and lanky.

GENERAL CULTURE.—Keep all superfluous growths cut away, and the fruits well out in the full light. The leaves can be shortened, but plenty of foliage must remain, or the health of the plant may be affected.

PESTS AND DISEASES.—There are several incidental to this crop. They are known as black spot, yellow spot, the same disease that affects the potatoes, black stripe, green and white fly, red spider, and eelworms. They generally arise from the use of rich soil or over feeding, a want of more air, unhealthy surroundings, such as a damp, humid atmosphere will produce, whilst an atmosphere that is too dry, or an insufficient supply of water, will induce the fly and red spider, and sometimes mealy bug.

HINTS ON THE CULTIVATION OF TURNIP AND VEGETABLE MARROW.

TURNIP.

French-NAVET. German-HERBST RÜBE, Dutch-RAAP. Italian-NAVONE. Spanish -- NAEO.

DESCRIPTION.—A hardy vegetable producing a bulbous root, which is cooked and caten. The tops are also used in winter, cooked under the name of "Greens."

VARIETIES .- These vary in shape, eolour of skin and flesh, in early maturity, and hardiness.

SEASONS FOR SOWING.—To have Turnips in May the seed must be sown in Mareh in a heated frame, seattered broadeast and pressed into the soil. April is soon enough for the first sowing out of doors, to be followed by others about every month up to the end of July. The yellow-fleshed varieties are best for winter use.

How to Sow.—Sometimes in drills a foot apart, but more usually broadeast in beds.

GENERAL CULTURE.—Fairly rieh and well dug soil, but firm, suits this erop best. If loose it will often deeline to bulb.

ENEMIES AND REMEDIES .- The Turnip beetle-fly is a terrible pest on light soils in hot, dry weather. Soot seattered between the seedlings will get rid of slugs. To eheek the beetle it is a good plan to soot the row or bed at early morn, and then pass a soft broom over the young plants; this smothers the underside of the leaf, where the vermin congregate, with dusty dirt and they do not like it. Repeat the dose a few days after and they will soon depart. In a field the operation is done with a light wooden roller. Types of roots affected with the Gall Weevil and Finger and Toe are also shown. Lime, soot, and soda are good in ehecking the Weevil, but the Finger and Toe is often due to errors in eulture, shallow digging, or a want of lime in the soil.

Gall Weevil, showing how it affects the roots.

VEGETABLE MARROW.

French-Courge A LA MOELLE. German-Schmeer Kurbiss.

DESCRIPTION.-- A tender plant, the fruit of which is eooked and eaten.

VARIETIES.—These vary in colour of skin, size, and flavour. In growth most are trailers but one variety is bushy.

How AND WHEN TO Sow.—Three or more seeds placed an ineh deep in a well-drained pan eontaining rich soil, and stood on a greenhouse shelf, or on a hot bed, will quickly germinate from Mareh to May, or they may be sown during the latter month on the heap where they are intended to grow through the summer. This latter method saves transplanting, which sometimes is a check to the growth unless properly managed. Marrows will not stand the slightest frost.

AFTER-CULTURE.—Plenty of water during dry times is essential, and the fruits should have a piece of porous tile laid under them. Although some do not eut the fruit until ripe, it is most delieately flavoured when eaten young.

ENEMIES.—Cold and sunless weather often eheeks the growth, and sometimes slugs are troublesome; these ean be got rid of with dustings of soot.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

Turnip affected with Finger and Toe.

For full particulars, see opposite page. Photographed and Copyrighted by J. C. & Co.

A VALUABLE TURNIP FOR FRAMEWORK.

Carters' Early Forcing.—(*See Photograph opposite.*) A new and distinct Turnip for frame or outdoor work. It matures more rapidly and is fit for table quicker than any other variety we know of. In shape it is distinct, whilst the flesh is close, firm, and crisp.

Award of Merit, Royal Horticultural Society, to Mr. E. Beckett, Head Gardener to the Right Hon. Lord Aldenham, for Roots sown in cold frame March 6, and exhibited May 8.

Mr. G. WYTHES, Head Gardener to his Grace the Duke of Northumberland, writes :-- "A perfect root, and a great gain for forcing under glass and early crops on border. It is also good at any season, as its length of root defies drought, and do not lose their quality."

In sealed packets, 15. pcr packet.

OTHER SPECIAL TURNIPS FOR EARLY USE.

Carters' White Swan's Egg.—A very distinct and symmetrical Garden Tumip. It comes to the size of a lemon, is of rapid growth, the top remarkably small, short, and very compact. The flesh is of fine texture, and the flavour particularly delicate and melting.

In sealed packets, 8d. per ounce.

"I am very pleased with Carter's *White Swan's Egg* Turnip. It is not only of first-class quality but I pulled Turnips over a fortnight before anyone near here, and what is far more to the purpose, nearly twice the size of any other sort I saw."—E. A. II.

Early Milan.—A very quick growing red-top strapleaf variety, clean in growth, and very fine flavour. This is an exceptionally fine selected stock.

Price 6d. per ounce, 2s. 6d. per pint.

Early Munich.—A popular carly purple-top variety.

Price 6d. per ounce, 2s. 6d. per pint.

For cultural directions, see page 81.

FREE CARRIAGE OF GOODS. See page 195.

CARTERS' JERSEY LILY TURNIP.

Carters' Jersey Lily.—(See Illustration.) The most perfect in outline, and the best White Garden Turnip grown. In shape as round as an orange, of exquisite flavour, with single tap root, and very distinct small top.

In sealed packets, price 1s.

Carters' Purple-Top Strapleaf. --A variety with plain strap-like leaves and flesh of fine texture ; colour of top of root

a rich reddish purple. A perfect model in form, and highly valuable for early use as well as for exhibition.

In sealed packets, per ounce, 6d. ; per pint, 2s. 6d.

Carters' Golden Rose.—One of the hardiest and best Winter Turnips; flesh of a rich golden-yellow colour, with single tap root; flavour most delicate and melting. Awarded a Special First Class Certificate at the Vegetable Conference of the Royal Horticultural Society.

In sealed packets, price 1s.

Carters' Crimson-Top Table Swede.—A choice stock of Swede Turnip with orange flesh, and specially adapted for growing as a winter table vegetable.

Per pint, 1s. 6d. ; per ounce, 3d.

KOHL RABI, or KNOL KOHL.

Photographed and Copyrighted by J. C. & Co.—GREATLY REDUCEO IN SIZE. CARTERS' EARLIEST WHITE OR PURPLE KOHL RABI. Each IS. and IS. 6d. per packet.

CULTURAL DIRECTIONS.

DESCRIPTION.—A useful vegetable, not nearly so much eultivated in this country in gardens as it would be were its merits known.

USE.—As a substitute for Turnips, especially in hot dry seasons. The bulb grows entirely out of the ground.

VARIETIES .- There are two varieties in general cultivation, the white and the purple.

CULTIVATION.—Prepare a breadth of good well-manured soil. Drill the seeds in rows about 15 inches apart in May, and thin out to about 9 inches apart. They are ready for use when they attain the size of a small Turnip.

Our High-Class Vegetables. -- We would direct attention to the fact that nearly 60 of the varieties forming the First Prize Collection exhibited at the Vegetable Congress of the Royal Horticultural Society, September, 1903, were grown from seed supplied by us.

VEGETABLE MARROW.

Photographed and Copyrighted by J. C. & Co. SELECTING TRUE STOCKS OF VEGETABLE MARROWS AT OUR TRIAL GROUNDS, NO. 3.

Carters' Trailing White .- One of the quickest growing varieties we know of; the fruit will extend to a great length whilst retaining all the tenderness of small young Marrows.

In sealed packets, price 6d. and 1s.

MUIR'S PROLIFIC.—A distinct variety, with small globulai fruit, creamy-white in colour, and solid flesh.

In sealed packets, price 1s.

PEN-V-BVD (The best in the world) .- A round fruiting Marrow, creamy-white in colour ; very superior.

In sealed packets, price 1s.

SEED POTATOES.

THE ADVANTAGES OF PLANTING A RELIABLE CHANGE OF SEED POTATOES.

It is generally admitted that one of the most fruitful elements of the potato disease is supplied by a repeated growth year after year of the same stock of potatoes on the same land.

Another danger frequently recurring is the gradual undermining of the constitution of the potato by injudicious selection, alternately resulting in a weakly impoverished stock that too readily succumbs to the earliest attacks of the potato murrain.

Too much importance cannot be attached to this subject, and a change of seed is positively essential if a thoroughly reliable and superior crop is expected.

Our stocks have been grown and selected with the utmost vigilance, and under normal conditions of soil and situation will produce first-class crops.

We grow potatoes on the chalk in Kent, on the sand in Bedfordshire, on the rich fen-lands in Lincolnshire, and the healthy loams in the Lothians, so that we possess the advantages of a distinct change to send every customer.

Our crops are especially grown for seed purposes, that is to say, they are not over-fed for the sake of producing enormous tubers. They are kept true to name and description, and are not lifted until thoroughly ripe.

We go to this trouble and expense with a view to make our potatoes as diseasercsisting as the season will permit.

We do not list several of the rank-growing new varieties that are only fit for field culture.

For particulars of the celebrated NORTHERN STAR, see coloured inset facing page 1.

For hints on cultivation, varieties and prices, see following pages.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

HINTS ON THE CULTURE OF THE POTATO.

French -- POMME DE TERRE, German-KARTOFFEL, Dutch-AARDAPPEL, Italian--PATATA, Spanish-PATATAS.

DESCRIPTION.-A popular vegetable grown for its tubers, which are cooked and eaten.

VARIETIES. -- These vary in extent of haulm, size, shape, and colour of skin and flesh in the tubers, and in quickness of reaching maturity. The different classes being described as for forcing, for summer use, for autumn use, for winter and keeping.

PLANTING SEASON .- From November to May according to requirements.

How TO PLANT.—When new potatoes are wanted by Christmas, sprouted tubers should be planted early in November in pots, in fairly rich soil and stood in a heated house. For later use potatoes may be grown in a frame to which heat can be applied when necessary. Tubers produced in this manner do not grow very large, but are very sweet eating.

For outdoor culture, on dry soils in particular, it is customary to sprout the tubers before planting them in the ground ; this gives them a start. As early frosts damage the growth of this erop they should not be planted, unless in sheltered borders, until the middle of April. Smalltopped early varieties from 12 inches apart in the rows with 18 inches between the rows, and strong growing later kinds 18 inches apart with 3 feet between the rows—all about 6 inches deep. One bushel eontains about 500 seed tubers.

AFTER TREATMENT.—Frequent hoeing between the rows to let in both air and rain, which is beneficial. Earthing up admits greater action of the sun and assists the tubers to increase in size. The crop is not ripe until the haulm has withered. The season for this to happen depends upon the variety and extends from August to November.

Potatoes should be stored in a dark place with an equable atmosphere between 40 and 50 degrees.

ENEMIES AND DISEASES.—The potato disease is a dreaded scourge, and as it seems to be connected with the weather, it is difficult to assign anything that will hinder its ravages. Spraying with a poisonous compound is adopted in the fields in some localities, and is often beneficial, but it can never become a general practice in small gardens. Good healthy tubers with a clean friable soil not over-fed are the best checks.

88

CARTERS' HAND-PICKED SEED POTATOES.

EARLY VARIETIES.

Carters' First Crop.—(*See Photograph.*) A perfect type of forcing or frame Kidney Potato for a gentleman's garden. The haulm is compact, and the tubers come in remarkably quick. They are beautifully shaped, and the flesh is of a pale canary colour.

Price, per peck of 14 lbs., 55. Trial Box, 1s. 6d.

Carters' Advancer.—Kidney shaped, smooth skin, white flesh, medium haulm. In the trials of the Royal Horticultural Society a few years since this variety was one of the very few that were selected for fine appearance and good cropping qualities A heavy producer on all good garden soils.

Price, per peck of 14 lbs., 4s. Trial Box, 1s. 3d.

Carters' Early Favourite. — An ovalshaped, white fleshed, smooth skinned Potato, with a medium haulm. A first-class cooker from light and medium soils. A very useful Potato where space is limited, for it can be dug in an ordinary season during July.

Price, per peck of 14 lbs., 48. Trial Box, 1s. 3d.

Sir John Llewellyn.—An early White Kidney Potato, raised in Wales, stated to be 24 days earlier than rcliable stocks of *Early Ashleaf Kidney*. Haulm fairly tall, cyes shallow. Award of merit, R.H.S. It has proved a good cropper in our trial grounds.

Price, per peck of 14 lbs., 108. 6d.; per lb. 1S.

Carters' Royalty.—(See Photograph.) A grand early Potato. It produces a medium haulm, of clean lustrous growth, and is very productive on all soils, the tubers seeming to retain their whiteness, dryness, and fine flavour when cooked under all methods. In the Cheshire County Council agricultural experiments it came out first in its class, beating fifteen others. Although an early Potato it will keep good until the end of the year.

Price, per peck of 14 lbs., 4s. Trial Box, 1s. 3d.

Carters' Excelsior.—The earliest round variety with which we are acquainted. Compact in growth, and a good table Potato on all kinds of soils.

Price, per peck of 14 lbs., 4s. Trial Box, 1s. 3d.

Carters' Enterprise.—This fine early oval Potato has been grown for some years by a well-known Lincolnshire expert, and we have been so impressed with its cropping and cooking proporties that we are determined to give our customers the opportunity of trying it. The name under which we had it being purely a local one, we re-christen it as above, and hope many of our customers will test it on this recommendation as a first early, almost white-fleshed cooker.

Price, 15. pcr lb.; 65. per 7 lbs.; 105. 6d. per 14 lbs.

Carters' Long Keeper. — (See Photograph.) Although many late Potatoes keep well enough up to the end of winter, it is often difficult to find tubers grown in gardens in a good cating condition after that period. In Carters' Long Keeper our customers will find something satisfactory, as it does not grow an outrageous haulm. It is almost round in shape, with a white flesh, very floury when cooked, and a good eropper	5.			<i>d</i> .		<i>d</i> .

IMPORTANT NOTICE.

It is necessary that Seed Potatoes procured during winter, and not required for planting for several months, should be taken out of the bag or package in which they are received and laid out in an airy shed protected from frost, or the eyes will begin to sprout and a weakly growth follows. It is the custom with professional gardeners to lay out the tubers of early varieties in the light to induce sturdy sprouts, and each Potato is carefully planted with this growth on it.

GRASS SEEDS FOR LAWNS.

Photographed and Copyrighted by J. C. & Co. A WELL KEPT LAWN.

PLAIN INSTRUCTIONS HOW TO MAKE A NEW LAWN AND RENOVATE AN OLD ONE.

PREPARATION OF THE GROUND.

Dig up the ground to the depth of the blade of a spade or fork, throwing over the spadefuls so that the underneath soil will be brought to the surface, the old turf being turned below. Pick out roots, weeds, and large stones as the work proceeds.

Whenever soil is dug up or disturbed it is as well to seize the opportunity and dig in stable or farm yard or other manure. If the spade cannot be stabbed through the turf, it may be found necessary to take the turf off with a turfing iron, or it can also be done with the spade.

Break up the clods with an iron rake, and level up the ground; all large stones, roots, and weeds being gathered up and taken away.

It is necessary to consolidate the surface before sowing seed. Grass will not thrive in a loose bed because the sun or frost penetrates and destroys the tender rootlets.

This operation is undertaken with a heavy roller; roll and cross-roll, all weak places being carefully levelled up with the rake. This will leave the surface smooth and firm.

SOWING THE SEED.

Before sowing the seed it is well to disturb or scratch the soil very lightly with an iron rake, and in

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

this state it is ready to receive the seed.

This operation should be undertaken on a calm day; grass seed is very light, and the least puff of wind will blow it away. The ground should be divided into squares of 4 yards each way, or 16 square yards, and the seed required for that area should not be less than 1 pound, which is at the rate of 1 bushel of 25 pounds to an area of 20 yards each way, or 400 square yards. The weight of seed that we recommend is a great

The weight of seed that we recommend is a great deal more than a farmer would sow for agricultural purposes, but then pasture grasses are more robust and spreading—a liberal seeding is necessary for quick results and a firm close turf. The operator should not wear boots with high heels as they disturb the level of surface. The seeds when sown on the ground should almost touch one another.

QUANTITY OF SEED REQUIRED.

One bushel of seed weighs 25 pounds. This is the least that we can recommend for an area (*see Diagram*) which has been divided into 25 parts, allowing one pound of Grass Seed to be sown on each.

The object of dividing up the area and seed is to insure an even distribution, and it avoids any possibility of the sower missing a small part of the ground by accident.

Do not use less seed than is recommended. If the surface is not thickly seeded, the grass may appear tufty, and must be renovated at the following season, whether spring or autumn, whichever is the nearest.

GRASS SEEDS FOR TENNIS.

DEVONSHIRE PARK, EASTBOURNE. (Photo. by C. Breach, Eastbourne.) A SIMPLE GROUND PLAN. removed from an old pasture. I

A PLOT, 20 YARDS EACH WAY, OR 400 SQUARE YARDS, READY FOR SOWING, MARKED OUT WITH STRING INTO 25 SQUARES OF 4 YARDS EACH WAY, OR 16 SQUARE YARDS.

COVERING THE SEED.

After the seed is sown, and before removing the string, sifted loam should be evenly laid over by hand at the rate of I bushel for the 4 yards each way, or I6 square yards, or about 18 bushels per 20 yards each way, or 400 square yards. If this operation is carefully carried out the seed will all be covered to a depth of about $\frac{1}{4}$ -inch, it *should not be more*. This will nourish the seed and also hide it from the birds.

As regards using loam or sand for covering, the operator must be guided by whichever it is easiest to procure, but generally it may be taken that a very heavy clay would be improved with a covering of sand, and a poor sandy ground would be improved with a covering of good loam. Any soil that binds too tightly when rolled should not be used.

The best soil is that found where turf has been Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

E. (Photo. by C. Breach, Eastbourne.) removed from an old pasture. It should be as free as possible from weed seeds.

ROLLING.

The seed being covered with fine sifted loars of sand, the next operation is to roll once very lightly; if rolled hard the top covering may be inclined to harden and cake, which makes it difficult for the young seedlings to penetrate. It must be done with judgment, and with an eye to keeping the correct level, or it may be found that certain spots will require a sprinkling of soil to bring them up; the soil used in such places should have a little seed mixed with it.

If there is any danger of birds taking the seed, a simple way of frightening them is to peg black thread across in various ways about two inches off the ground.

Under favourable circumstances, that is to say, if the seed and soil has been moistened by rain or watering, the growth will be showing in little spears in a few weeks. These will spread into grass plants in about five or six weeks. At this stage the grass seedlings should reap the benefit of further nourishment, and we recommend the use of compost (see note, p. 96), which, when spread over the growth to a depth of not more than $\frac{1}{4}$ inch, or at the rate of about 1 bushel for the 4 yards each way, or 16 square yards, or 18 bushels per 20 yards each way, or 400 square yards, will assist to protect the small plants from excessive cold, heat, or drought; at the same time the manurial constituents materially strengthen the rootlets and consolidate the sole of the turf.

RENOVATING WORN GRASS.

In spring or autumn, whichever is the nearest, cut the grass as short as possible. During dull weather scratch out with a rake all moss or weeds, collect and burn the refuse, then loosen the bare patches so as to assist the tender roots of the new grass to penetrate down; this is very important. We have seen dead turves lightly scratched and then sown with seed, which has germinated, but the seedlings being unable to penetrate through the old turf perish during frost, intense heat, or drought. All dead turf recently laid should be removed, as the decaying roots stiffe the seedlings.

95

GRASS SEEDS FOR GOLF.

ROYAL PORTRUSH GOLF LINKS.

SOWING THE SEED.

After the soil on bare or thin patches is well raked up, gently press the surface with the back of a spade, add a little compost (see below) to level up, and sow the grass seeds by hand at the rate of a quarter or half that recommended for a new lawn. The quantity depends upon the condition of the turf,

COVERING THE SEED.

COVERING THE SEED. After the seed is sown, it should then be covered with compost to a depth of not more than a quarter of an inch, the less covering the hetter at this stage; the seeds should be hidden—that is all that is required—the surface raked, and then rolled very lightly. If the weather becomes dry, the growth will be much assisted by watering with a fine spray, care being taken not to wash the seed ont. Under usual circumstances grass should beshowing through within there weaks, and two or three weeks after that it should be within three weeks, and two or three weeks after that it should be about a half an inch high. When the young grass is about an inch high, it is often advantageous to throw over a light covering of the compost used at sowing time; it helps to stiffen the tender growth. It may be mown now at any time, preferably with a

scythe the first two cuttings, although some gardeners who are experts at bandling the mowing machine may do it with this tool.

COMPOST.

The compost should be made up of one-half leaf mould, or good loam free from weed seeds, and one-half well rotted stable or farm-yard manure, mixed together and passed through a sand screen or sieve; or, three-quarters leaf mould, ar good loam free from weed seeds, and one-quarter Carters' Artificial Complete Grass Manure, mixed together and sifted as just recommended.

To keep grass in good condition at least half an inch of compost should be applied each year—say one dressing of an eighth inch early in September, an eighth late in autumn, an eighth in March, an eighth in Applied during showery weather; it will hourish grass that has been much worn, and will belp it to wild the distinct of the mark of the set of the set. help it to withstand the vicissi tust may be made the work, and will never be permitted to make more than two inches of growth, nor should the flowering stems be allowed to appear, as these will make the finest grasses look rough and shaggy.

PRICES OF CARTERS' FINEST GRASS.

AS SUPPLIED TO HIS MAJESTY'S GOLF GROUNDS AT WINDSOR.

A mixture of the very fine bladed species, which, if sown according to our recommendations, should produce a close thick turf on all good soils.

Price, 30s. per bushel of 25 lbs. ; 4s. per gallon ; 1s. 6d. per Parcel Post pound.

PRICES OF CARTERS' FINE GRASS.

A prescription adapted for lawns near towns, in confined spaces, or upon cold and ungenerous soils; or in any situation where a stronger growth than that made by our Finest Grass is desirable. Price, **25s.** per bushel of 25 lbs.; **3s. 3d.** per gallon; **1s. 4d.** per Parcel Post pound.

Carters' Fertilising Fibre.

We supply Carters' Fertilising Fibre for newly-sown ground, which is a combination of fibre and manure. It tends to lighten a clayey soil, and gives more substance to a poor, thin soil. It should be applied at a thickness of not more than a quarter of an inch, or at the rate of 1 bushel per 16 square yards, or 4 yards each way, after the growth is well above the ground. It is best to scatter it about in dull weather before rain,

Price, in sealed bags of 5 busbels, per bag 75. 6d. : per 5 bags, 325. 6d. ; per 10 bags, 60s. Carriage paid.

Carters' Grass Manure.

Carters' Grass Manure. When applied as a food to existing grass in the spring or autumn the grass can be cut as usual during the grow-ing season. It should be sprinkled over the grass during showery weather at the rate of 56 lbs. (price 12s. 6d., carriage paid) per 400 square yards, mixed with three times its own bulk in sifted mouid or sand, according to the composition of the existing earth—a heavy clay would be improved with sand, wbile a sandy soil would be improved with good loam. Price—14 lbs., 45. 6d.; $\frac{1}{2}$ cwt., 75. 6d.; $\frac{1}{2}$ cwt., 175. per cwt. Carriage paid.

14 lbs. will dress 100 square yards, or 10 yards each way.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. -- 1904.

CARTERS' POPULAR BOXES OF SEEDS.

The Seeds offered in our Collections are of the best re-selected stocks only, taken from the same sacks as general orders given from this Catalogue. We can supply more Seeds for the money when purchased in this form, because we put up these Collections by the hundred, and by such means effect a great saving in labour. They can be despatched immediately, packed in wooden boxes, and sent carriage frec to any Railway Station in the United Kingdom, on receipt of remittance. It is inconvenient to make alterations in these Collections.

CARTERS' GUINEA BOX OF KITCHEN GARDEN SEEDS. 21S. 21S.

CONTAINS-

- 14 pints PEAS, best for succession, including Carters' Lightning and Telephone.
- 4 pints BROAD BEANS, in variety.
- 1 pint RUNNER BEANS, Carters' Champion.
- 1 pint FRENCH BEANS, Canadian Wonder.
- 1 pkt. BEET, Carters' Perfection.
- 1 pkt. KALE, Dwarf Curled Scotch.
- 1 pkt. BRUSSELS SPROUTS, Perfection.
- 3 pkts. BROCCOLI, for succession.
- 3 pkts. CABBAGE, Heartwell, Beefheart, &c.
- 1 pkt. SAVOY, Dwarf Curled.
- 1 pkt. COLEWORT, Hardy Green.
- 21 ozs. CARROT, Intermediate, Early Horn, Surrey.
 - 1 pkt. CAULIFLOWER, Autumn Giant.
 - 2 pkts. CELERY, Crimson and White.

THE SWEET FRAGRANCE of OLD-FASHIONED FLOWERS.

Our Natural Flower Scents are the concentrated essences of living flowers extracted with such skill and care that the perfumes contain unimpaired the delicate and odoriferous constituents of the petals. They do not become stale or stain the fabric.

Fac-simile of the 10s. 6d. Handsome Cut-Glass Bottle.

The following perfumes are so exact to nature as to at once recall the characteristic and favourite odours of the respective flowers :---

CLOVE CARNATION.	HYACINTH.	Moss Rose.	WALLFLOWER.
HELIOTROPE.	LILAC.	NARCISSUS.	WHITE ROSE.
HONEYSUCKLE.	LILY-OF-THE-VALLEY.	Parma Violet.	WOOD VIOLET.

NIGHT SCENTED STOCK.

All the above are supplied in bottles. Price 2s. 8d., 5s. 6d., 7s. 6d., 10s. 6d., 21s., post free. The 7s. 6d., 10s. 6d., and 21s. sizes are Handsome Cut-Glass Bottles, most suitable for Presents.

LAVENDER WATER.

Larger Bottles. Price 2s. 8d., 5s. 6d., 7s. 6d., 10s. 6d., 21s., post free.

Gasters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

teristic and favourit WALLFLOWER.

We have recently added the delicious perfume of the Night Scented Stock, and we are quite

sure that the unique and fragrant sweetness of the flower and the

novelty and truth to nature and durability of the essence will speedily ensure for it the position of a first favourite.

The little flower (*Matthiola* bicornis) which yields this exquisite perfume is cultivated almost ex-

clusively for its lovely aroma. During the day the flower is an almost inconspicuous object, but as

night approaches it unfolds its petals and fills the evening air with a

subtle fragrance.

CARTERS' HANGING FERNS.

PERMANENT AND INTERESTING NOVELTY.

Photographed and Copyrighted by J. C. & Co. CARTERS' FERN BALL. First Year's Growth.

Photographed and Copyrighted by J. C. & Co. CARTERS' FERN BALL. Second Year's Growth,

DIRECTIONS FOR CULTIVATION.

Soak the whole design for an hour or two in rain water. Let it drain, then hang up in greenhouse or window. It should be taken down and watered two or three times a week, and kept always moist according to the dryness of the atmosphere in which it is placed. In due time it will throw out a mass of dainty fronds. These are very pretty and will remain in luxuriance through the summer; they will turn yellow in autumn and drop off. The Fern should be kept in a dry state during the winter months. Fresh fronds will come again with renewed vigour after the design or ball is watered in the following spring. Keep away from frost and gas as much as possible; for early results it is best to start the growth in a greenhouse or conservatory on about the first of March.

DORMANT BALLS.

MUSHROOMS BY SIMPLE METHODS.

Preparation of Material.--This is the most essential point to be studied to ensure success. Procure fresh stable manure, which should consist of half droppings and half short litter; this must be thoroughly turned over every other day for about a tortnight. Manure obtained from unhealthy cattle, or from those who have been fed on green food or carrots, should not be used for this purpose.

For Making Outdoor Beds.—The material should be put into a heap, the measurements of which should be, when made up, 2 ft. 6 in. at bottom, 2 ft. 6 in. high, and 6 in. wide at the top, and to any length required, the whole to be firmly put together. After making the bed, put stakes down the centre by which to gauge the heat, and cover all with long litter; after three or four days pull out the stakes, and when the temperature is at about 80° the bed is ready for spawning; break the bricks of spawn into pieces about the size of a hen's egg, and put it into the bed about 8 inches apart; cover the whole with fresh fibrous loam, and beat it well, making the surface quite firm, lightly water and smooth the surface with the back of a spade, finally cover up with long litter and Russian mats to keep away light and excessive moisture.

Mushrooms may also be grown in any shed or cellar where the temperature does not fall below 45° ; the best site for a bed is a hard dry floor. A moderate size bed would measure 5 ft. 6 in. \times 4 ft. 6 in. \times 1 ft. When made up and well pressed down, in about six weeks Mushrooms should show, and the bed should then have a light watering with tepid water about every ten days, as success depends upon maintaining an even temperature.

Another and very easy mode of providing a supply of Mushrooms in the autumn and early winter months is to insert lumps of spawn, in August, in the beds that are devoted to Cucumbers and Melons. By that time the heat of the fermenting materials has declined to the proper temperature for the spawn to "run" freely; and just when the Cucumbers, &c., are ready for removal, large quantities of Mushrooms are often seen breaking through the soil, and with protection in the form of hay coverings, the supply is continued for a long time. The spawn should be inserted rather deeply—four or five inches.

A CURIOUS FLORAL NOVELTY FROM CENTRAL ASIA. MONARCH OF THE EAST.

As originally named and offered by us.

This remarkable plant, as shown in the illustration, exhibits one of those extraordinary traits in nature that few are able to understand, for the magnificent flowers, as depicted, actually come out of the dry bulb without being placed in soil and water.

The flower sheath sometimes reaches a length of nearly two feet, is of a red-brown colour, tipped with red and yellow, whilst the inner parts of the flower are equally as brilliant. The bulb of this extraordinary plant needs only to be placed in some fancy receptacle, without water, in a warm room, or on the mantelshelf, when, without showing either leaves or roots, the flower makes its appearance, early in the year, thriving entirely upon the nourishment contained within the bulb.

Directly after the flower fades and a growth appears to be coming from the bulb, it should be potted in a large pot in good soil and freely watered. Later on an umbrella-shaped leaf will be formed on a stout stalk spotted with a granite-like colour, and

sometimes reaching a height of three feet. In autumn this leaf fades, when water should be lessened, and as soon as it has died off, the bulb is lifted out of the soil, cleaned up, and placed in a dry

condition in a warm room, when the previous year's display may be repeated.

Photographed and Copyrighted by J. C. & Co.

FIRST GROWTH-THE FLOWER.

"The MONARCH OF THE EAST is magnificent; it is two feet high, has never had any soil nor any moisture, according to the directions sent with it, and is simply perfect. I intend to show it to all my friends as it is a remark-able curiosity."—Mrs. Moore, Ardmore.

"The MONARCH OF THE EAST is a great success. Its length from base to tip is 281 inches, and length of flower 27 inches. It has had no earth or water. To-day it emits a strong odour like Freesias."-Miss FRVER, Clifton.

A LADY CUSTOMER writes: "The one you sent us in the spring has done beautifully in both forms. 1 am anxious to introduce these Bulbs to my friends.'

SECOND GROWTH - THE LEAF.

We have imported a limited quantity of this novelty, price 15. 9d. each, carriage free.

Although these plants will produce their flower in any warm, dry place without support, we offer Special Oriental Bowls for holding one Bulb. Price, 9d. and 1s. each.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON.-1904.

CONCISE DIRECTIONS FOR THE GENERAL CULTIVATION OF ANNUAL, BIENNIAL, AND FLOWERS. PERENNIAL

ANNUAL flowers are not only among the most beautiful ornaments of the summer flower garden, but the ease with which they are cultivated, and the long time they remain in bloom, give them the highest claim to our attention and care.

bloom, give them the highest claim to our attention and care. Annuals are not what they were in former days. The skill of the hybridizer in the production of new varieties, and the diligence of the enthusiastic florist in the selection of the funest plants, have entirely changed the character of many of these flowers. What should we do without the grand Pæony-flowered Asters, the brilliant double Zinnias, the large-flowered and rich-coloured Petunias, the Dwarf Nasturtiums, large-flowered Sweet Peas, and new annual Delphiniums? These give an entirely new feature to our approach to be cherished by give an entirely new feature to our annuals, to be cherished by every lover of beautiful flowers.

every lover of beautiful flowers. Among florists and gardeners, the term "annual" is given to those plants which are sown in the spring, bloom and seed in the summer, and soon afterwards perish. A few are included among annuals, like the Petunia and Mignonette, because they flower the first year; but they are only annual as regards treatment. By cultivators they have been divided into three classes—viz., Hardy, Half-hardy, and Tender Annuals—a very convenient classification; and as such we shall treat of them here. them here.

HARDY ANNUALS.

The cultivation of what are popularly known as hardy

HARDY ANNUALS.The cultivation of what are popularly known as hardy annuals, although simple in a sense, requires a certain annual of knowledge to ensure satisfactory results. As a rule the seeds are sown much too thickly, and no more space is given to the contents of a whole packet than should be reserved for not more than half-a-dozen plants. The result is that one practically crushes the existence out of its neighbour, and the outcome is a poor, weedy specimen instead of a strong bushy plant. Many of the common garden flowers are most beautiful when given proper room in which to mature, and where they are grown under proper conditions a pleasing effect is obtained without much trouble. They do not require any artificial heat at any period of their growth, and are capable of enduring any ordinary weather from April to November, a frosty morning-not unusual in the former month, or even in May-doing them no injury if advanced beyond the seed leaf. Many may be sown in autumn, and, if kept under protection through the winter, make large plants and flower earlier than when the sown in autumn, and, if kept under protection through the application of very old decayed manure or leaf-mould, will give the obstant of cranuals, in the autumn, if possible, and the application of very old decayed manure or leaf-mould, will give the amateur a well-prepared and may first of all it should be well drots, when hely would escape damage in one of the opposite character. Neither should he situation be too dry, as, in this place of a vigorous bloom. Where the soil is too light, a thin layer flow or dany, first of all it should be result and up in (after being pulverised by the winter frosts) in the strong the state and dug in (after being pulverised by the winter frosts) in the strong of a day of the beat, served or the surface in the antumn, in layer of clay, if to be had, spread over the surface in the antumn, in good conduito.

TIME FOR SOWING.

This must depend much upon the season as well as the locality. Our springs are so variable that no definite period can be named. As a general rule, the proper time to commence sowing is about the middle of April, though a few sorts may be planted as soon as the ground can be got ready; and for a succession the sowing should be continued until June.

METHOD OF SOWING.

This must be varied according to the style of the garden and and the variety to be sown. Many of the most showy and beautiful annuals are very impatient of removal; and these

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

must be sown where they are to remain and flower. Other annuals may be transplanted, and some of which flower the stronger for removal. In small gardens undoubtedly the best way is to sow where they are to remain, thinning out the superfluous plants; this gives the least trouble, but in larger gardens, or where there are beds of early spring bulbs to be filled, there for each best the is to some in well measured the safest and best plan is to sow in well prepared boxes, and, when the young plants are of proper size, to transplant to the flower garden.

Hower garden. Never sow seed when the ground is very wet, particularly early in the spring. Select a time when the soil is neither wet nor dry. If there are vacant heds, the seeds may be sown in rows across the bed; but if in the border, where there are only limited spaces among the perennials or bulbs, they may be planted in masses or groups. It is a great error to cover the seeds too deeply; and the cause of more than half of the complaints against seedsmen comes form increasing or wort of indrawat is seedsmen.

Cause of more than hall of the complaints against seedsmen comes from inexperience or want of judgment in sowing. No rule can be given in this respect; but, as a general guide, all large seeds, such as Sweet Peas, Lupins, &c., may be sown one to two inches deep—smaller, less; and for the smallest, just a pressing in and covering. If sown too deeply, they are longer -in germinating, and are liable to decay. Avoid the general error of sowing the seeds too thickly, as it causes an elongated and feeble growth, which no subsequent thinning will entirely remedy. remedy.

remedy. If the weather should be warm, or the soil very dry, it will be advisable to give a slight watering with a pot with a fine rose. It is not often that seeds planted in April need watering; but later in the season they frequently require it. Use water of the same temperature as the soil; or if warmer it will do no harm. The watering should be given in the afternoon and repeated every few days, as when the seeds begin to swell they are more susceptible of injury from drought, and the young plants often perish when it is neglected. A good plan with very small seeds is to cover them with a sheet of paper pegged down, being careful to remove it before the young seedlings appear above the surface; otherwise they will be drawn up weakly, and are likely to be injured by the hot sun or a cool night. Seeds vary in their period of germination. Some a cool night. Seeds vary in their period of germination. Some will be above ground in a week, while others require two or three weeks.

three weeks. As soon as the seedlings have made three or four leaves, and are an inch high, they should be thinned out. If they are kinds which will bear removal, they may be replanted in vacant spaces in the border. No rule can be given for thinning. Tall-growing plants with spreading branches will require more room than slender-growing dwarf kinds. Stir the soil around the plants from time to time, and if they appear crowded, a second thinning will be of great benefit to those that remain.

TRANSPLANTING.

Presuming that many cultivators will transplant the seed-lings into prepared boxes, from whence the plants are to be removed to the borders to bloom, it is necessary that the work should be carefully performed to ensure success. Transplanting should, if possible, always be done in cloudy weather, and towards evening. If the soil is dry, the plants will require a light watering to settle the earth around the roots. This applies more particularly to seedlings transplanted from a bed or pan to another position. All large-growing plants should be trans-planted singly; but many of the smaller may be removed in patches, without any trouble, if the soil is previously well watered. After the plants are established, they will need no other care than to the up the taller growing sorts to stakes, to prevent the wind and rain from beating them down to the ground and injuring the blossoms. . The flowering period of all annuals may be lengthened by

The flowering period of all annuals may be lengthened by keeping the seed-pods picked off when the flowers wither, because the production of these takes a great deal of strength out of the plant, and, if allowed to develope, its beauty as a decoration in the garden ceases.

HALF-HARDY ANNUALS.

We have already remarked that half-hardy annuals are those that require the aid of artificial heat to assist germination; but it should be understood that this is not absolutely necessary if the sowing is deferred until the ground is warm—say the end

of May. This is exemplified in the Portulaca, which sows itself; but the plants rarely appear above ground till June; and those who do not wish the trouble of sowing seed early should plant in open ground in May. But to gain time, and ensure an early and abundant bloom, it is hest to plant early, and assist the growth by a gentle artificial heat. Some of the most magnificent annuals are embraced in this class, of which the Aster and Zinnia are leading examples. The cheapest, most convenient, and simplest mode of doing this is the ordinary hot-bed of stable manure, which gives a gentle bottom-beat quite sufficient for any of this class. Presuming that the bed is made and all ready for use, the seeds may be sown on the prepared soil, just the same as in the

Presuming that the bed is made and all ready for use, the seeds may be sown on the prepared soil, just the same as in the open ground, and afterwards transplanted to the borders; but as this is often attended with many failures in inexperienced hands, it is the safest to sow the seeds in pots or pans; if in neither of these, in shallow boxes. The soil should consist of a uniform compost of light, sandy loam, enriched with some fine leaf-mould, avoiding any raw or crude manures, which are certain to injure the young plants. Put in a few crocks at the bottom of each pot for drainage, and fill to the brim with the compost, giving the pot one or two gentle knocks on the bottom to settle the earth, which should be within half an inch of the rim. Level the surface by gently pressing it with the bottom to settle the earth, which should be within half an inch of the rim. Level the surface by gently pressing it with the bottom of a pot, or the hottom of a wine-glass. Observe the same rules in regard to covering that we have already named. Some kinds will need nothing more than a thin sprinkling of earth, just to fairly hide the seeds; and each pot should have the surface again gently pressed down. A slight watering with a very fine rose will complete the operation of sowing. When all the pots are filled and planted, and marked, as they should be, with the name of each and date of sowing upon a neat label, remove them at once to the hot-bed or frame, and place them perfectly level, so that each pot may receive its

place them perfectly level, so that each pot many precive its proper proportion of water evenly over the surface. Sometimes the level of the bed gets disturbed hy the manure rotting. If this happens it should be raked over, footed, and re-levelled down. If there are bot a few pots, and a greenhouse is at hand, they may have a place on a sunny shelf near the glass, shading them during the middle of the day. The temperature should not exceed 75°, or the seeds will germinate to optickly, and he drawn up weakly. As the seedlings appear above ground, give air by tilting the sashes at the back. Give water as the pots require it, and always at the same temperature as the bed, and be careful and always at the same temperature as the bed, and be careful in the operation not to wash away or destroy the young and slender seedlings. During cold nights a mat may be thrown over the frame, which will prevent the loss of heat, and maintain a more even temperature. As some of the seeds will make their appearance before others, those that appear above ground should be placed together towards the back of the frame, where they can have a greater abundance of air and be more freely watered than the others. As the plants acquire a proper size, they should be thinned out so as not to injure those that remain ; and then, when farther advanced, should be transnlanted into four-inch pots—one, three, or five actime a proper size, they should be think out out of a hot to injure those that remain; and then, when farther advanced, should be transplanted into four-inch pots—one, three, or five plants in each, according to the variety—using a compost in the bed, and shading slightly till they are well established and able to bear the full sun. Those that are later in vegetating should be treated in the same manner, until all are transplanted, unless it is such kinds as will not bear removal safely, and must be allowed to remain in the pot in wbich they were sown, thin-ning them out so that not more than three to five plants are left. By the end of May, the seedlings will be ready for trans-ferring to the beds or borders where they are to bloon; but before this is done the plants should be "hardened off," as it is effected by gradually giving the plants more air, and when the weather is favourable, both day and night, removing the sahes wholly during the day; or if more convenient, removing them

weather is favourable, both thy and man, removing the sames wholly during the day; or if more convenient, removing them to a cold frame, where they can be fully exposed in the daytime, and protected at night, if cold, with a covering of mats. Much must be left to the judgment of the cultivator and the amount of available space, the object being to prevent the plants from being injured hy a too sudden exposure to the open air. Proceed in transplanting as already recommended under that head for hardy annuals head for hardy annuals.

BIENNIALS AND PERENNIALS.

Biennial and perennial plants are almost indispensable additions to the flower garden, displaying their blossoms both early and late, succeeding and even flowering with the spring bulbs, and continuing long after the frost has destroyed the hardiest Annuals. They are also so easily cultivated, and require so little care for their great amount of beauty, that they must be ranked as the most showy objects of the flower-border. We only need name the Antirrbinum, Calliopsis. Oriental Poppy, Columbine, Gaillardia, Larkspur, Phlox, Lychnis, &c., as a few among the many imposing and elegant groups.

Biennials are those plants that generally do not flower until the second year, and, after blooming, die. These include, however, many splendid things, such as the Foxglove and Canterbury Bells. Perennials are plants which generally do not bloom until the second year, but continue to bloom for years in succession, and may be propagated, after once obtained, by division of the roots, growing more vigorously and flowering hetter if divided and replanted every three or four years. The proper time for sowing the seeds of hardy kinds is in April or May, in order to obtain a good strong growth the first year and a greater abundance of flowers the second; but the sowings may be coutinued with success as late as August, after which the plants will not become strong enough to flower the following year. Whether the seeds are sown in heds or in the border, the young plants should be thinned out, and afterwards transplanted, just as we have directed for hardy annuals, only giving them more room, and encouraging a vigorous growth by giving them more room, and encouraging a vigorous growth by hoeing, watering, &c. On the approach of severe frosty weather, protect the plants with a light covering of leaves or coarse manure, and the succeeding year they will blossom in great profusion.

SELECTION OF ANNUALS AND

BIENNIALS.

Miniature Growing. -- Calandrinia umbellata, ionopsidium, mesembryanthemum, portulaca, sanvitalia, sedum, leptosiphon, saponaria.

Plants under Six Inches.—Clintonia, pulchella, cornflower (miniature), limna thus, lobelia, nemophila, phlox Drummondi compacta, rock cistus, saponaria, silene compacta, sweet alyssun. sweet pea (dwarf), tagetes signata, pumila, Virginian stock.

Plants from Six to Ten Inches.—Ageratum, antirrhinnm (Little Gem), aster (Dwarf Bouqnet), aster (Victoria) bartonia aurea, calendula pongei, calliopsis nana, candytuft, collinsia bicolor, convolvulus minor, daisy (Swan Rivert, dianthus, erysimum, eutoca viscida, eschscholtzia, gilia tricolour, Indian pink, jocobæa, larkspur, linaria, linum (scarlet), lupinns nanus, malope, marigold (dwarf striped), ringionette, nasturtium (Empress of India), oxyura, phacelia, rhodanthe, stock (Ten-week), tagetes, viscaria cardinalis, whitlavia grandiflora, zinnia. whitlavia grandiflora, zinnia.

Plants from One to Two Feet .-- Antirrhinum, Plants from One to Two Feet.—Antirrhinum, amarantbus, balsam, bidens atrosanguinea, calendula, calliopsis, celosia, chrysanthemum (annual), clarkia elegans, clarkia integripetala, cornflower, godetia, gypsophila, paniculata, hibiscus, helichrysum, love-in-a-mist, lupinus subcarnosus, mimulus, nigella, petunia, pink mallow, poppy, salpiglossis, scabious, schizanthus, sweet sultan, zinnia pumila.

Creepers and Climbers.—Convolvulus major thunbergia, variegated hop, mina lobata, canary creeper, coboca scandens, tall nasturtium, sweet pea.

Annuals with Everlasting Flowers.-Acro-clinium, ammohium, helicbrysum, helipterum, morna, rbodanthe, waitzia, xeranthemum.

SOILS FOR POTTING PLANTS.

Equal parts Loam, Peat, Leaf-Mould, and **Equal parts Loarn**, Pear, Lear-Mould, and Sand.-Adianthum (maidenhair fern), aralia, ardisia, asplenium (fern), bouvardia, caladium, canna, clerodedron, cuphea, datura, epiphyllum, erythrina, gardenia, gloxinia, grevillea, habrothamnus, heliotrope, hoya, impatiens, jasminum, lantana, lastrea (fern), magnolia, osmunda (fern), passiflora, pteris (fern), tacsonia, todea (fern), tradescantia.

Two parts Loam, one part Leaf-Mould, one part Sand.—Agathæa, agave, aloysia, amaryllis, aristolochia, arum, asparagus aspidistra, auricula, begonia, bougainvillea, calceolaria, calystegia, campanula, capsicum, celosia, cereus, chamaerops (palm), chimonanthus, chrysanthe-num, cinerarin, cirtus, clematis, clianthus, cobeæ, coleus, coprosma, cycas (palm), cyclamen, dablia, davallia (harefoot fern), echeveria, eucalyptus, fuchsia, funkia, geranium, gossy-pum, gynerium, humea, hydrangea, kalanchoe, lavatera, nignonette, myrtle, oleander, osmanthus, pancatium, pandanus, pelargonium, phoenix (palm), phormium, pilea, poinsettia, pelargonium, pheenix (palm), phornium, pilea, poinsettia, primula, ricinus, roses, salvia, scaforthia (palm), sedum, smilax, solanun, thalictrum, verbena, wigandia. All the common annuals will thrive in this compost.

Two parts Peat, one part Sand.—Aphelexis, azalea, boronia, cypripedium, erica (heaths), kalmia, lycopodium, platycerium, polygala, rbododend100 (greenhouse), selaginella.

ASTER.

Since the introduction of this beautiful garden Flower into England by the late Mr. James Carter, about the year 1830, continuous skilful cultivation has produced the present phenomenal development in form and colour.

The whole group may be best described as half-hardy annuals, the seeds being best sown under glass in early spring, and the seedlings pricked out into boxes or in frames for planting out or potting as the occasion requires, when they are ready about June.

The Aster in its various tall and dwarf forms makes a grand Bedding plant. as its fullest beauty appears when the ordinary summer flowers are beginning to look rusty. The blooms are freely produced and last long, and are effective until spoilt by the frosts of autumn. The magnificent *White Plume*, see page 114; *Victoria*, see page 115, and the fashionable Single types on page 117, together with the *Comet* class described below, should be largely grown in every garden.

Comet. - A very attractive class, with flowing petals. For pot work or planting out. Fine for cutting. Height about 1¹/₂ feet.

Photographed and Copyrighted by J. C. & Co. CARTERS' LITTLE GEM ANTIRRHINUM.

A dwarf and compact strain. Flowers variously coloured from pure white, as shown above in the Photograph, to the richest crimson purple. Our strain makes a good pot plant, and is invaluable in borders or bcds, and if the withcring flowers and seed pods are kept picked off, will last in bloom for a long time, and continue again the following year.

CARTERS' CHOICE BEGONIA.

A VERY POPULAR PLANT FOR POTS AND BEDDING OUT.

See Photograph opposite.

Saved at our Nurserics from one of the finest groups in Europe, including only the newest and best forms, many of which are absolutely novel. Such a strain cannot be obtained elsewhere.

The seed should be sown in heat in winter to produce strong flowering plants in the summer, in pans of very fine soil. Then prick off into boxes and pot off. Carc should be used when sowing as the seed is very fine. We can also supply tubers ready to start into growth in carly spring. See page 183.

Begonia, Carters' "Crown Jewels" Mixed Single.—It is impossible to praise too much this superb strain of this highly-favoured flower;						
it is simply perfection, and needs but finished culture to attain universal						
celebrity, alike for size and quality of the flowers, combined with brilliance in						
colours. Grand for bedding out.						
No. 257. In sealed packets Is. 6d., 2s. 6d., 3s. 6d., &						
Begonia, Carters' Choicect Double.—This glorious strain contains all						
the best forms and most brilliant colours in cultivation.						
No. 254. In sealed packets 25. 6d., 35. 6d., &	5	0				
Begonia, Carters' "Fringed" Double.—This is a production of great novelty and beauty, and is bound to create a sensation.						
No. 255. In sealed packets 2s. 6d. &	5	0				
Begonia, Carters' Perpetual Bedding.—Fibrous-rooted, dark-leaved species; flower rosy-crimson.						
No. 258. In sealed packets 15. 6d., 25. 6d., 35. 6d., &	5	0				
Begonia Hybrida Cristata.—Novelty with grand flowers, crested by the elongation and fimbriations of the stamens; 70 per cent. true from seed.						
No. 256. In sealed packets 2s. 6d. &	5	0				

For price of Begonia Bulbs, see page 183.

"I raised 200 plants from the 2s. 6d. packet of Crown Jewels Begonia. They are a grand lot, and have been very much admired."

Mr. W. H. JENNER, Gardener to Miss Walters.

"I have about 60 plants of Crown Jewels Begonia now in flower. They are really good, and have been greatly admired."

Mr. J. CRISP, Gardener to Miss Willis.

CARTERS' BRILLIANT PRIZE CINERARIA.

(See Coloured Photograph on opposite page.)

Our house has long been famed for its Cinerarias, and extra care has been taken in the selection of the plants this season. The colours are simply lovely; vivid self and brilliant bordered varieties, &c., unequallcd.

Sow seed in pans filled with a good light sandy compost in spring up to the beginning of June, and place in a cool frame. Transfer to small pots as soon as the seedlings have developed their nice leaves, and pot on as the plants require it. They should be grown in a cold frame until frost necessitates their removal to a greenhouse. Even in winter they should not receive much artificial heat. Will come into bloom from Christmas to May.

Cineraria, Carters' Brilliant Prize Mixed.—The only strain awarded two Gold Medals of the Royal Botanic Society. Choicest colours saved from largest flowers.

No. 398 In sealed packets, 2s. 6d., 3s. 6d., and 5s. each.

From a Customer in 1903.

"The Cinerarias are now blooming, and for size, colour, and shape are the finest we have ever seen. Several blooms measure over five inches, and one well over six inches in diameter."—J. A. WIIITCHURCH, Great Barford House.

Cineraria, Carters' Snowflake.

No. 399. Pure white In scaled packets, 2s. 6d., 3s. 6d., and 5s. each.

Cineraria, Carters' Choice Double.-Of all the finest forms and colours. No. 401 i.. ... In sealed packets, 28. 6d., 38. 6d., and 58. each.

Cineraria (Single) "Ixion."-A novel and eccentric variety, with semi-quilled petals.

No. 402 ... In sealed packets, 15. 6d. and 25. 6d. each. ,, 400. Cineraria, mixed, ordinary strain In sealed packets, 15. 6d. and 25. 6d. each.

Photographed and Copyrighted by J. C. & Co.-REDUCED. CINERARIA, STELLATA.

Carters 237, 238, & 97, HIGH HOLBORN, I.ONDON. - 1904.

Cineraria, Stellata.—This free-panicled variety has now obtained general approval, especially for decorative arrangements, and as grown at the Royal Gardens, Kew, and elsewhere, has proved marvellously effective, and has proved to be a valuable adjunct to the much admired Carters' *Brilliant Prize*. It should be raised and treated the same as the other greenhouse varieties.

No. 403. In sealed packets, 25. 6d., 35. 6d., and 55. each.

Cineraria, Cruenta Hybrids.—Similar in form and habit to the *Stellata* varieties, but more compact.

No. 1297. In sealed packets,

1s. 6d. and 2s. 6d. cach.

Cineraria, Maritima.—A well-known hardy silver-foliaged perennial, for bedding or mixed borders; height 1½ feet. Seed should be sown in pans in early spring under glass, and the seedlings pricked off into boxes, hardening before planting out.

No. 404. Per packet, 6d. and 1s.

A coloured photograph. Natural size of bloom. AWARDED THE GOLD MEDAL OF THE ROYAL BOTANIC SOCIETY, 1902-1903.

CARTERS BRILLIANT PRIZE CINERARIA

Illustrating range of colours. Price per packet (all colours mixed), 5/-, 3/6, and 2/6.

Natural size of bloom. A coloured photograph.

 Carters The Sultan.
 Carters Duke of Connaught.

Each in sealed packet, separate, 2/6 and 1/6.

- Carters Princess Ida,
 Carters Rosy Morn.
 Carters Fairy Queen.
 Carters Princess May.

All colours, mixed, price 5/-, 2/6, and 1/6.

CARTERS' "PERFECTION" CYCLAMEN.

The Coloured Photograph opposite is intended to give some idea of the range of colours contained in our lovely strain.

Photographed and Copyrighted by J. C. & Co.-REDUCED IN SIZE. CARTERS' PERFECTION CYCLAMEN, WHITE SWAN. Showing habit.

Sow at any time (spring and autumn to be preferred) in pots or pans, in peaty loam and sand, covering the Sow at any time (sping and autumn to be preferred) in poss of pairs, in pearly form and stand soll correcting the soil scarcely a quarter of an inch, place on warm shelf near the glass in greenhouse, keeping the soil moist but well drained. The seed takes from four to eight weeks to germinate. When the bulbs are the size of a pea transplant singly into small pots, transferring to larger pots as the plants develop. An average of 60° is the temperature best suited for producing strong trusses of flowers, and good ventilation without draught is a safeguard from disease. We also supply dry bulbs at end of summer (see page 183).

No. 464. Carters' Superb Mixture, unequalled. Price, in sealed packets, 1s. 6d., 2s. 6d., and 5s. CHOICE CYCLAMEN IN SEPARATE COLOURS, AS UNDER. Price, in sealed packets, 15. 6d. and 2s. 6d. each :-

CARTERS' VICTORIA PRIZE CALCEOLARIA.

CALCEOLARIA, VICTORIA PRIZE.—It is impossible by photography to give any adequate idea of the glory and beauty of these magnificent flowers; the variations and markings are endless, the flowers are of large size and perfect in form, and the habit is unexceptionable. Our exhibit at the TEMPLE SHOW OF THE ROYAL HORTICULTURAL SOCIETY is always the theme of general admiration.

Photographed and Copyrighted by J. C. & Co.-NATURAL SIZE.

A popular and lovely flower, always in fashion. In colour and form unique, with a pleasing fragrance in many types. Whether grown in pots for conservatory decoration or in the garden beds for summer display, its charms are equally attractive. Our seed is saved with the greatest care, and should produce a large percentage of the very best flowers.

Sow in spring in cool frame, prick out, and plant out in good soil when strong enough.

Wasterd 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

CENTAUREA MARGARITA, OR GIANT WHITE SWEET SULTAN.

Centaurea Margarita, or Giant White Sweet Sultan. — As a cut flower the blossoms are much larger than those of any other, and the very essence of white purity. It is most deliciously scented, with long flower stalks to facilitate cutting, and when cut will last in water for a fortnight. In this respect alone it exceeds any other annual we can call to mind. We give this flower the highest possible recommendation.

May be sown in pots and pricked out for early flowering, or in open borders in spring for general work.

Per packet-s. d.

No. 360. Margarita. Pure white 1s. 6d. & 2 6

CHRYSANTHEMUM-ANNUAL GARDEN VARIETIES.

Of all Annuals these pretty flowers perhaps hold the premier position, and many of them have been raised on our Sced Farms. All are beautiful in beds and borders and good for window boxes or cutting. Sow seed in spring in boxes for early flowering, and in the open for general work. Some varieties make useful pot plants; they should be sown under glass and thinned out to about 4 or 5 plants. $1\frac{1}{2}$ feet.

Dahlia.—Carters' Cross-fertilised Strains.
The Double Dahlia was for half a century a
leading florists' flower. However, fashion
changes, and the Single Varieties a few years
since evoked a species of mania which has
not yet subsided. Yet another kind now heads
the race, the so-called Cactus Dahlia, of which
our illustration shows the type. Our strain has
been specially hybridised and fertilised with
various species, and should produce some novel
kinds. Sow the seed in early spring, in heat,
and pot off. Plant out as soon as large enough
in June. We can supply plants in May. (See
page 183.)
Per packet-s. d.

Dianthus Chinensis (Indian Pink). - We are inclined to assert that there is no tribe of hardy flowers more generally known and admired than the "Pink" tribe. We consider the Heddewigi section introduced by our house from the East, and the parent of many of the best types, to be the finest addition to our annual flora for the last fifty years, and the varicties detailed below are the improved results from the original importation. Sow in spring in boxes or pots, and transplant to where intended to bloom. No. Per packet-s. d. 496. Crimson Belle. Colour a rich brilliant crimson. I foot • • • • I O Diadem. Singular colour, black, with distinct 497.

white border I o Diadematus fl. pl. A double variety of extra-498. ordinary beauty, edged and blotched ••• ... I O

Carters 237, 238, & 97, HIGH HOLBORN, LONDON .- 1904.

CARTERS' INVINCIBLE PRIZE GLOXINIA.

AWARDED TWO SILVER CUPS, Royal Horticultural Society, 1903.

(See Coloured Plate opposite.)

It may be asserted without fear of contradiction that no flower for exhibition produces a greater effect than a first-class group of Gloxinias. The superb mixture we offer under the name *Invincible* is magnificent. It contains all the best self-colours, crimson, sapphire, purple, rose, blush, violet, white, &c., also the finest edged, tipped, ringed, and shaded varieties, together with the most beautiful spotted or marbled kinds, and is the finest we have seen.

A CUSTOMER WRITES :- "I raised 500 plants from the packet of Gloxinia; they are now blooming and comprise some beautiful colours."

Culture.—Sow in well-drained pans from January to March (or in the autumn), fill the pans with soil consisting of a mixture of half peat and half leaf mould, with a small quantity of pulverised charcoal and silver sand sifted very fine to within half an inch of the rim; water with fine rose, then sow the seed thinly, taking care not to cover it with soil; place in a temperature of 75 deg., and cover the pans with a piece of shaded glass, gradually removing the same as the seedlings progress. When large enough to handle, prick off into pans at about one inch apart, then pot off into single pots. Many will soon attain the requisite strength to go into 5-inch or 48 pots, and will bloom in August and September of the same year. The potting-off soil should consist of one half good loam, one-half fibrous peat, with a good sprinkling of sand and broken charcoal.

For price of Gloxinia Bulbs, see page 183.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

CARTERS INVINCIBLE PRIZE GLOXINIA.

AWARDED THE SILVER CUP AT THE TEMPLE SHOW, LONDON, 1903.

CLIMBING NASTURTIUM.

ROND3

Nasturtiums, both elimbing and dwarf, are of the easiest culture, and anyone desirous of having a display of the most briiiiant flowers, without any trouble beyond sowing the seed, should select this delightful family, as they will give off their best efforts right through the summer, merely needing the seed balls picked off.

The colours of the dwarf varieties contain many more shades and tints than the climbing section, and both may be grown near the ground if the situation requires it, but the Climbing Nasturtium shows off its best features when climbing over a fence or rustic woodwork.

PANSY, OR HEARTSEASE.

Photographed from Nature and Copyrighted by J. C. & Co.

CARTERS' "INTERNATIONAL" PRIZE PANSY.

THE FINEST STRAIN IN CULTIVATION.

The Pansy is a delightful Plant for spring and early summer flowering in beds and borders, and this grand strain produces enormous blooms under good cultivation.

Sow seed in pans or boxes of light sandy soil in cold frame in spring, and plant out. Seed can also be sown in autumn, when plants will bloom early in the following year.

No. 633. In sealed packets, 15. 6d. and 25. 6d. eaclı.

GIANT HOLLYHOCKS. Photographed and Copyrighted by J. C. & Co.

HOLLYHOCK.—This stately plant has been seen at its best during the past moist summer. It makes a grand show in summer at the back of an herbaccous border.

Seed is usually sown in summer, and the plants grown on to flower next season, but some prefer to sow in boxes or on a hotbed early in the year, prick the young plants out, and plant out in April to bloom same summer. We can supply plants in spring.

LARKSPURS AND DELPHINIUMS.

ANNUAL AND PERENNIAL.

Carters' New Annual Delphinium, Blue Butterfly.—The greatest aequisition in blue annual flowers for many years. The Royal Horticultural Society, when granting it the Award of Merit, stated in their report that it is "a dainty annual of bushy branching habit, and very floriferous." The seed should be sown in February, in heat, and grown on in pots until ready for bedding out.

No. 698. In sealed packets, price 1s. 6d. and 2s. 6d. each.

The **Perennial Delphiniums** are best sown in summer, as they then make strong plants to flower following season. They can be sown early in spring as well.

All are very effective in borders during the early summer.

N

AND AFRICAN MARIGOLDS. FRENCH

A very showy class of annuals for beds and borders. The Calendula and Tagetes are closely related to these. See pages 124 and 174.

All may be sown in March in boxes or pots under glass, then transplanted into boxes to make sturdy stuff for planting out in June or earlier.

Culture.—Sow in pans of finely-sifted soil in spring, and pot off singly into thumb pots when large enough to handle. They require to be raised in heat and kept growing in cool house or frame. A cool bottom for pots to stand on is essential. Use a compost of leaf mould and rich fibrous loam when shifting into larger pots.

Casters 237, 238, & 97, HIGH HOLBOBN, LONDON. - 1904.

Photographed and Copyrighted by J. C. & Co.

PHOTOGRAPH OF ONE OF OUR HOUSES OF PRIMULAS AT FOREST HILL.

To bring a Florist's Flower to the highest state of perfection, there are many operations that have to be carried out by skilled hands, quite unknown to the purchaser of the packet of tiny seeds. This photograph illustrates the act of cross-fertilising two varieties of Primulas in order to obtain something new. It was by this process that we produced our

magnificent new variety King Edward, as illustrated on page 1 of the cover.

SISTER MARY writes in 1903:-"The Primulas have been very beautiful. The gardener from the Castle asked where I obtained the seeds, as he had never seen so fine a strain."

For particulars of our choice Primulas, see page 153.

.

CARTERS' LARGE-FLOWERED SWEET PEAS.

(See Coloured Photograph.)

General Remarks.—LATHYRUS ODORATUS, or SWEET PEA, first reached us from its home on the shores of the Mediterranean, a modest bluish-purple flower, scarcely shadowing forth a promise of the foremost position it now occupies in the floral world. The late Mr. James Carter gave prominence to several varieties in his early Catalogues, and we were one of the pioneers in its improvements, and some remarkably handsome forms are now available, remarkable for delicious fragrance, enormous size, graceful form, and general adaptability for decorative purposes—vases, tables, posies, &c., and rows of it should be found in every garden. See our Selection, No. 1161 below.

Cultivation.—It is preferable to sow seed in prepared trenches in spring, but they may also be sown in rows or clumps in flower borders. Protect the young plants from cold and cutting winds, and stick them as soon as they need it. Where a quantity of cut flower is needed, it is advisable to make more than one sowing. To obtain flowers in May they should be sown in autumn in pots, kept under protection, but cool, through the winter, and transplanted out in March.

For general convenience we append a selected list of Twenty proved distinct varieties, in our opinion the best for growing separately. Many of the group are shown in the coloured photograph on opposite page. Our own saving :-- In sealed packets-s. d.

French-ASPERGE.

German-Spargel.

Seedling Asparagus.

1. Asparagus Beetle. 2 Growth, showing Grub and Eggs. 3. Planting Roots on Ridges (see cultivation). Strong Root, showing spring growth. Much reduced.

DESCRIPTION.—One of the most delicious and highly-prized vegetables in cultivation, the edible portion of the plant being the young shoots which are cut as soon as they attain the length of about six inches. They are extremely succulent, and are said to possess many excellent diurctic properties.

VARIETIES.—The original plant is a native of Great Britain, and is found growing wild on the seashore, and those in cultivation have been obtained by careful selection, one of the best types being Carters' *Mammoth Emperor*.

CULTIVATION.—The best crops and finest shoots are obtained from plants grown in a deep, rich, and friable loam, but good results can be obtained on most soils by careful cultivation. Having decided to make a bed, trench the plot selected deeply in the autumn, adding plenty of good farmyard manure. In early spring break down the surface nicely, and plant the roots in rows on ridges a foot apart, allowing the plants 12 inches space in the rows, parting the roots so that they fall nicely on each side of the ridge, and taking care not to damage the roots more than can be helped. When the planting is completed, fill up the spaces between the ridges with rich soil to about three inches above the crown of the plants, then make it firm. Two-year old roots are best for planting, and they should not be cut from for at least two years. Roots for forcing can be supplied directly the top growth withers in autumn, but for planting a bed the roots should be obtained about the end of March or early in April.

PROPAGATION.—Seeds may be sown in drills in April, thin out and transplant when two years old.

GENERAL HINTS.—The cutting should finish early in June, and the growth then thrown up must be permitted to mature through summer. Copious supplies of water are necessary during summer so that the roots may be encouraged to become as strong as possible for producing thick heads for next year.

PESTS.—The plants often suffer from the drepredations of a beetle which lives in the summer growth and produces cggs and a grub as shown in the illustration. They should be picked off and destroyed.

HINTS ON THE CULTIVATION OF SEAKALE.

French-CRAMBÉ.

German—SEE-KOHL.

Dutch---MEERKOOL.

Roots planted and covered with a pot.

CART TESTED

Roots in full growth in an ordinary seed box.

Planting and forcing root of Seakale.

Head of Seakale, showing where to cut.

DESCRIPTION. — A vegetable raised in the dark, and eaten when boiled. Serve up with sauce.

WHEN AND HOW TO BUY.—Dormant roots, as shown in illustration, are ready as soon as the frost has killed the leaves in the autumn, and are sold by the dozen and hundred. The small sample represents what is called a planting root for outdoor use; the large one a strong root for forcing purposes.

TIME OF PLANTING, AND HOW TO PLANT. — For forcing, from November to February, in either heated frames, or in boxes placed in a hothouse about 6 inches apart (see Illustration). If for ourdoor treatment, plant in triangles, each root 9 inches apart, and cover with a Seakale or an ordinary pot (see Illustration). When garden pots are used, the holes should be stopped up. The roots may be set in rows, in any quantity according to requirements. from January to March, to be ready for cutting from March to May.

WHEN TO CUT. —When forced in the dark in heat, the growth grows rather close, and should be cut when about 6 to 9 inches in length. Out of doors it will be more spreading, and may be left to get a little longer.

It is in cut from December to May, according to the heat applied, and strength of the roots to produce it quickly.

How to Cut.—This operation is clearly shown in the illustration. Sometimes side growths also come, which may be cut close to the stem. Take away covering after cutting, and let new growth develop during summer. If a flower spike appears cut it out.

SOIL.—This should be very rich, and kept fairly moist. The pots, or whatever covering is used out of doors, are generally surrounded with fresh stable manure, to assist a quick and tender blanch growth.

ENEMIES.—The wood-louse (see *Iclustration*) is the most destructive, and may be checked by a sprinkling of salt over and about the plants during growth; or a toad put in the pot for a night or two will account for a good many.

GENERAL NOTES.—It is best to obtain a fresh supply of roots each winter. Some plant the old ones out, and when this is done, they are permitted to make all the growth possible through the summer. The leaves drop off after the first sharp frost, and the roots are ready soon after for treating again, either in the tocd where they stand, or put into boxes.

Seakale can also be grown from seeds, but it takes some time to get strong roots.

For prices of roots, see page 184

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

FORCED HEADS OF CHICORY.

It is only on the Continent one ean appreciate the delieate piquaney attached to salads, as they seem to understand them better than we do here. Chieory is a leading ingredient in French salads, and the plant is so easily cultivated that it should be more popular here. The seed is sown in late spring, in a sheltered position on a nice soil, very similar to Carrots, the plants thinned out to about 9 inches apart and left to grow on until the end of the summer, when the growth will die down, leaving a 100t somewhat like a Parsnip. These are taken into a shed and kept in a heap of soil away from frost, and transferred to a hothouse when needed to produce their blanched heads during winter. They may also be grown in boxes as described in the article upon Seakale culture (*sce page 187*).

Price of seed, 6d. and 1s. per packet.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON. - 1904.

MESSRS. CARTERS' CASH PRIZES FOR 1904.

JAMES CARTER & Co., Seedsmen to His Majesty the King, 237, 238, & 97, High Holborn, London, undertake, upon being furnished with certified evidence from the Secretary of any Horticultural Society in the United Kingdom, to duplicate First, Second, or Third Money Awards made to the exhibitors who show the products of Seeds and Potatoes from purchases made by the exhibitor from this Catalogue above 108. in value, and obtained direct from Messrs. Carters' establishment during the twelve months ending June 30th, 1904. The said duplication will be limited to the value of the purchase, but exhibits of exceptional merit will be treated with liberality at the option of Messrs. Carter.

The products to be of the exhibitor's own growth, and in case of any dispute as to purchase, &c., an invoice of the seeds purchased must be produced if required, and the specimens are to be staged in accordance with the regulations of the Society. This offer does not apply to special prizes offered by Firms and other Patrons.

EXAMPLE.—If IOS. or 20S. are offered by the Society as Prizes for, say, the best dish of Peas, James Carter & Co. will award an equal amount if their eustomer gains one or other of them, providing his purchase extends to IOS. or 20S., and that he has carried out the above conditions.

Customers intending to elaim the advantages of these Special Prizes must notify the fact to us a week before the day of the Show, stating the names of the Vegetables, Potatoes, or Flowers they intend to stage, when we will send neatly named eards, which must be exposed to view on the exhibit during the whole time of the Show, or if not we may withold the prizes. We shall also send the applicant a sheet on which to record his prizes to save the Secretary unnecessary work.

IMPORTANT.—If this announcement does not appear in the Prize Schedule of the Horticultural Show in the intending Competitor's district, the offer must be considered cancelled. We are always pleased to hear from our Customers of their intention to compete, and in the event of their winning open prizes, we may decide to give them an honorarium for their trouble. We invite our Customers to bring this novel form of Prizes to the notice of their local Horticultural Society.

These Prizes are open to all Messrs. Carters' Customers, but not available to Market Growers, Seedsmen, Nurserymen, or Horticultural Traders.

PRIZES GAINED BY CUSTOMERS IN OPEN COMPETITION.

Since our Customers commenced sending records of their Prize-winnings, gained in open competition with the produce of our Vegetable and Flower Seeds at Horticultural Exhibitions in various parts of the Country, we are enabled to compile an extraordinary list of successes. Space will not permit extended reports, but we give below sufficient particulars to convince the most exacting cultivator that CARTERS' TESTED SEEDS maintain their reputation all over the United Kingdom.

10,040 PRIZES REPORTED BY CUSTOMERS.

Southern Counties			2,452 Prizes in Open Compctition against all Comers.
Eastern Counties		•••	1,014 Prizes in Open Competition against all Comers.
Western Counties		•••	1,889 Prizes in Open Competition against all Comers.

Photographed and Copyrighted by J. C. & Co. A VIEW IN CARTERS' EXPERIMENTAL GROUNDS, No. 3, MORTLAKE, SURREY.

MESSRS, JAMES CARTER AND CO.'S MORTLAKE TRIAL GROUNDS.

Most fortunate in getting possession of the ground on which Most fortinate in getting possession of the ground on which their various flower, vegetable, and other trials are conducted is this eminent metropolitan seed firm. It is placed just mid-way between Mortlake and Richmond Stations, on the Windsor branch of the South Western Railway. There is always some thing to see in such trial grounds, and though the huge trial of some 1,000 rows and 250 varieties of Peas was practically over, there were many other things to command attention. The firm there were many other things to command attention. The firm have a high reputation for their havn grasses, and to that end keep very many patches of diverse grasses, and mixtures suitable for lawns, tennis courts, cricket pitches, bowling greens, and golf greens. All of these, some fifty in number, of varying sizes, were sown last autunn, as early as September, some in October, and others in March and April. Besides these testing patches there are two large ones specially kept to show the value of their grasses for golf greens. All are kept regularly mown. What are described as Mixtures, varying according to soils and requirements, give most perfect lawns, and the natches sown as late as the spring seem to be as good as and the patches sown as late as the spring seem to be as good as those sown last autumn. The firm advise using the seed with a liberal hand, even at the rate of some twelve bushels per acre. That anyone should endure the miseries of a weedy lawn when

A liberal hand, even at the rate of some twelve bushels per arce. That anyone should endure the miseries of a weedy kawn when by first thoroughly cleansing the ground, then sowing with the best lawn grasses, they may have a lawn of the most perfect wind, passes comprehension. If Peas are over, there is furnished in the many pods put to dry off evidence of the care taken to secure fine stocks. The first sexperts go over every row or variety and mark the plants that are producing the best of finest pods. These alone when ripe are gathered, wintered, and then sown to create the improved stocks of the fitture. No other pods are gathered. That is one of the things which show what the seed trade is doing to supply the best class products to customers. Runner Beans are now fast coming to perfection, and the may stocks there represent the finest of strains. How far we have got away from the old short-podded forms of Painted Lady and scarlet flowered the present stocks show. The firm have a strain which is designated Holborn Seedling. It gives seeds of diverse colours, and fire, long, handsome pods. A parti or red and white flowered stock has been obtained, which resembles in bloom the old Painted Lady, but is far more prolific, as the pods are double the length of those of the original variety.

Carters 237, 238, & 97, HIGH HOLBORN, LONDON, -1904,

Carters' Champion (white flowered) and Carters' Juhilee (red flowered), with Holborn Seedling and their Ne Plus Ultra all

Carters' Champion (white flowered) and Carters' Juhilee (red flowered), with Holborn Seedling and their Ne Plus Ultra all give grand crops and superb, long handsome pods. Onions, both winter and spring sown, are just now a great feature. Of the latter there are some 250 rows, the stock throughout showing fine bulbing properties. A huge breadth of Lettuces was over, with the exception of one curled Cabbage variety named Holborn Standard, that refused to run to seed at all. It is, indeed, a useful late-keeping Lettuce. There were eighty-five varieties of Beets, there were 600 rows, and a wonderful collection of stocks. Of them all, we liked none better than Carters' Perfection, an ideal garden Beet. Spring-sown Cabbages, too, were in huge quantity, but being sown late were not yet matured. There were various other vegetable stocks, but these suffice for reference. Of course flowers are grown in rich profision. Specially notice-able was a big plantation of Hollyhocks from seed, carrying noble spikes of capital double flowers, varied in colours, white, yellow, pink, red, crimson, and other hues. The firm have long had a high reputation for their dwarf Tropzohmus. Just now, in spite of the heavy rains, a big breadth of the self yellow Golden Queen Nasturtium is most attractive, and is a fine (oil to a lesser breadth of Empress of India (rich crimson) close by. There are some beautiful dwarf Godetias, of which Rosamud (soft rose) is a beauty. Glorioso is an intense rich crimson, and Lady Satin Rose and Whitneyii are intermediate, yet most effective colours. Veryfine indeed is the strain of what are termed "Butterfly" Gladioh. These seem to be intermediate between the gandavensis and Lemoine sections, and have large flowers varionsly and brilliantly coloured. sections, and have large flowers varionsly and brilliantly coloured. Summer, Intermediate, and Brompton Stocks are grown in immense quantities.

Asters, all sown in the open ground, are later, but will give Asters, all sown in the open ground, are later, but will give a very fine show presently. So, too, will Helichrysums, Mari-golds, and varions other annuals. Amidst several rows of the Sweet Alyssum it was not possible to fail to notice one of the compact Koniga narritinuum compactum, 3 inches high, forming dense cushions of white flowers, perhaps the most perfect summer carpet plant to be found. Panises, Polyanthuses, and many other hardy things on trial are there also. Carnations from seed sown at this time last year have flowered, and still are flowering profusely, and carrying large double flowers. To see all that is growing in such trial grounds they need to be visited often. visited often,

TERMS OF BUSINESS.

CONDITIONS OF GUARANTEE OF QUALITY.	We guarantee our Secds according to the quality purchased to be of the highest average standard of vitality of the season, and it is open to the purchaser to confirm this by submitting the samples to professional analysis at his own expense. We cannot, however, be in any way responsible for the produce of Seeds sold under this guarantee, or for errors of description; and it must therefore be clearly understood that our responsibility ceases upon the final acceptance of the Goods.
ORDERS.	ALL ORDERS SHOULD EE WRITTEN SEPARATELY FROM GENERAL LETTERS OR LETTERS OF INQUIRY. Please write your name and address in full, also nearest Railway Station or Shipping Port to which the Goods are to be forwarded. All letters are opened under the direction of one of our principals, and the orders are given out for execution under personal supervision. Plant orders are sometimes delayed by severe or hot weather, and they at all times take longer to execute than Bulb or Seed orders, in consequence of the time required in lifting and packing, especially in the autumn after the long accumulation of orders.
NEW CUSTOMERS.	We beg respectfully to state that on opening an account it is necessary for us to receive Cash with the order, or a reference to a Banker or some one known to our House.
FREE CARRIAGE OF GOODS. (Except in cases where the cost of Carriage on the parcel, through being unusually bulky in proportion to value, absorbs the profit on the transaction, when we reserve to ourselves the right to send unpaid.)	We deliver SEEDS, POTATOES, PLANTS, and BULBS, CARRIAGE PAID to any RAILWAY STATION IN ENGLAND and WALES, IRELAND, and SCOTLAND, where practicable, also FREE by PARCELS POST to Purchaser's door where possible. We occasionally hear of charges being made by the Railway Companies, notwith- standing that our address label bears the imprint in RED letters "Carriage Tail." In cases where a Charge for the Railway Carriage is made, notwithstanding that the Package is labelled "Carriage Paid," Purchasers should on no account pay the demand, but refer the Carriers to us. Charges for delivery from Stations (if any) must be borne by the Consignee. Glass and other Goods liable to breakage are sent out securely packed, but beyond that we cannot be responsible for damage in transit. Notice of damage should be at once made to, and compensation claimed from, the Carriers.
CASH DISCOUNT.	We allow 5 per cent. discount off the total amount of invoice on all goods paid for with order, or within fourteen days from the date of invoice (but at no later period), UNLESS OTHER TERMS ARE SPECIFIED OR ARRANGED.
TERM OF CREDIT.	OUR FULLEST TERM OF CREDIT IS THREE MONTHS FROM DATE OF INVOICE, AND WITHOUT DISCOUNT, and our books are made up quarterly— $i.e.$, March 1st, June 1st, September 1st, and December 1st. Five per cent. interest will be charged upon overdue accounts.
REMITTANCES.	Postal Orders, Post Office Orders, or Cheques on any Bank are acceptable, and should be drawn in favour of JAMES CARTER & Co., and crossed "London and Westminster Bank."
EMPTY PACKAGES, HAMPERS, BONES, SACKS, BAGS, &C.	Are charged at cost price, and full price will be allowed on them when returned immediately. carriage paid and in good condition. These should be in every case marked—'' Emptics from — "; a letter by post informing us of their despatch is also necessary. Booking charges must be prepaid, and a receipt should be taken, so that the value may be recovered if they are lost or mis-sent. Coin, other valuables, or important communications should on no account be enclosed with returned empties. On receipt of a post-card we will send labels
ATTENTION TO CUSTOMERS.	It is our earnest desirc that all the requirements and directions of Customers be scrupulously attended to by our assistants, AND WE PRACTISE THE UTMOST PERSONAL SUPERVISION TO SEE THAT THEY ARE CARRIED OUT. We would, therefore, respectfully request that we be informed if at any time there is cause for dissatisfaction, that we may have it rectified at the earliest possible moment.
CHANGE OF ADDRESS.	Please notify to us any change of Permanent Address, in order that we may be able to forward our Catalogues with regularity. The favour of your kind recommenda- tion of our House to those of your friends requiring Seeds for the Garden or Farm, or Plants and Flower Roots for the Garden or Conservatory, is respectfully solicited. We shall be pleased, at all times, to forward our Catalogues to any address we may be favoured with.
